INTRODUCTION

This Service Manual contains all the technical information which will allow service personnel to understand and service the Panasonic S-VHS editing video cassette recorder model AG-DS 8 5 0 P.

This model is video cassette recorder for editing applications which was developed for applications in industry, educational establishments, studios and CATV transmissions. By the use of S-VHS system, a sharp picture quality with high resolution is obtained, and advanced editing by easy operation is realized by the introduction of highly dependable mechanisms.

Just slightly ahead of our time... Panasonic

SAFETY PRECAUTIONS

GENERAL GUIDELINES

- When servicing observe the original lead dress. If a short circuit is found, replac all parts which have been overheated or damaged by the short circuit.
- After servicing, see to it that all the protectiv devices such as insulation barriers, insulation papers shields are properly installed.
- After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazards.

LEAKAGE CURRENT COLD CHECK

- Unplug the AC cord and connect a jumper between the two prongs onthe plug.
- 2. Measur the resistance value, with an ohm meter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwhead connectors, contrl shafts, etc. When the exposed metallic part has a return path to the chassis, the reading shoulb be between $1\,M\,\Omega$ and $5.2\,M\,\Omega$.

When the exposed metal dose not have a return path to the chassis, the reading must be ∞ .

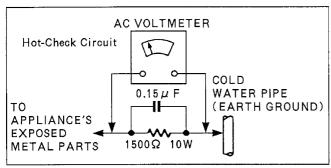

Figure 1

LEAKAGE CURRENT HOT CHECK (See Figure 1)

- Plug the AC cord directly into the AC outlet.
 Do not use an isolation transformer for this check.
- 2. Connect a 1.5 K Ω , 10W resistor, inparallel with 0.15 μ F capacitor, between each exposed metallic part on the set an a good earth ground such as a water pipe, as shown in Figure 1.
- 3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measur the potential across the resistor.
- Check each exposed metallic part, and measure the voltage at each point.
- Reverse the AC plug in the AC outlet repeat each of the above measurements.
- 6. The potantial at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possiblity of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

ELECTROSTATICALLY SENSITIVE(ES) DEVICES

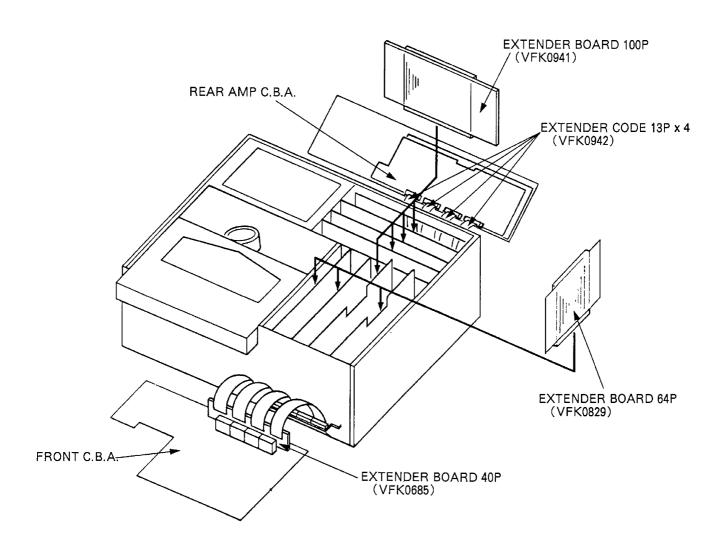

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

- Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground.
 - Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
- After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
- Use only a grounded tip soldering iron to solder or unsolder ES devices.
- Use only an anti-static solder removal device classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
- 5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
- 6. Do not remove a replacement ES device from its protective package untilimmediately before you are ready to install it. (most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
- Immediately before removing the protective material from the leads of replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
 - CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other asfety precautions.
- 8. Minimize bodily motions when handling unpackaged replacement ES devoces. (Otherwise harmless mother such as the brushing together of your clothes fabric or the lifting of your foor from a carpeted floor can generate static electricity sufficient to damage an ES device).

3. ROM VERSION DISPLAY

The ROM Version is displayed while the PLAY and RESET buttons are kept depressed as follows;

- 1. Eject a cassette tape.
- 2. Set the CONTROL switch to REMOTE.
- 3. Set the DIAL MODE switch to SEARCH.
- 4. Push the PLAY button together with RESET button.

4. HOUR METER RESET

- 1. Turn off the Power.
- 2. Connect a jumper wire between TP1 and TP2 on the INTERFACE C.B.A.
- 3. Set the CONTROL switch to REMOTE.

<< DRUM ON TIME >>

Turn on the Power while the STOP and FF buttons are depressed.

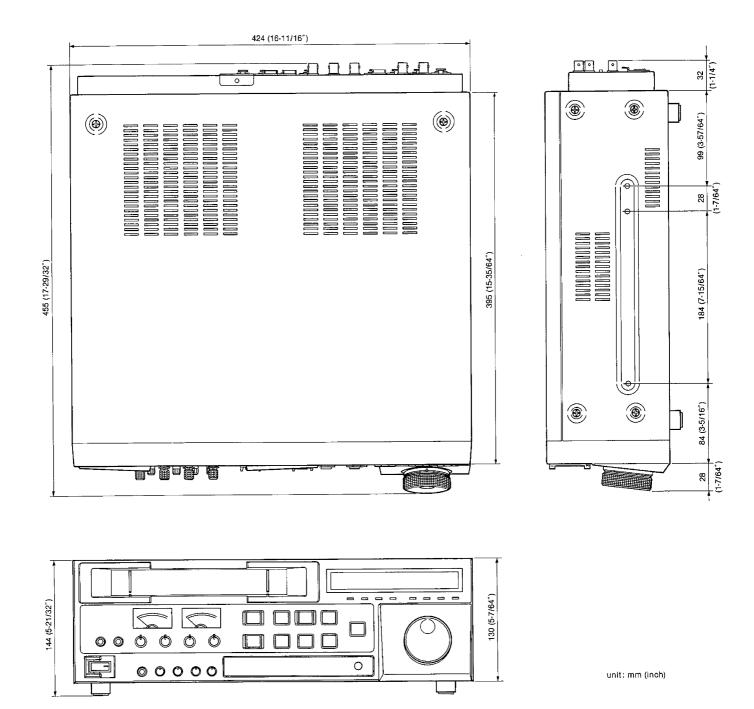

<< CAPSTAN ON TIME >>

Turn on the Power while the STOP and REW buttons are depressed.

Front panel parts

1. Level control area

Audio (CH1) level meter: Displays CH1 audio level.
Audio (CH2) level meter: Displays CH2 audio level or tracking level/video level
Audio (CH1) NORMAL LEVEL control: Adjusts recording level for normal audio CH1.
Audio (CH1) HI-FI LEVEL control: Adjusts recording level for Hi-Fi audio CH2.
Audio (CH2) Hi-Fi LEVEL control: Adjusts recording level for normal audio CH2.
Audio (CH2) Hi-Fi LEVEL control: Adjusts recording level for Hi-Fi audio CH2.

2. Function display lamp area

LTC/AUTO/VITC lamps:

WIDE lamp: Lights during WIDE signal recording and WIDE tape playback. Cassette "in" lamp [oo]: Lights when a cassette is loaded. S-VHS lamp [SVHS]: Lights in S-VHS mode Hi-Fi lamp: Lights when Hi-Fi audio is recorded or played back DOLBY* NR lamp: · Lights when Dolby NR system is used. FRAME lamp: · Lights in framing servo lock mode. LIMITER lamp: · Lights when audio limiter is on. CH2-TC lamp: Lights when audio CH2 is used as an LTC track. SERVO lamp: Lights in servo lock mode. CTL/TC/UB lamps: Lamp corresponding to selected counter display mode lights

Lamp corresponding to selected time code mode lights

3. Microphone area
Mic jacks (CH1/CH2): Connectors for M6 external microphones.

4. Headphone area
HEADPHONE jack: Connects M6 stereo headphones.
HEADPHONE LEVEL control: Adjusts headphones volume.

5. Picture quality adjustment area
TRACKING control: Adjusts noise position.
VIDEO LEVEL control: Adjusts input video level (push-pull type).

PICTURE control: Adjusts softness/sharpness of playback picture.

6. Basic operation area

EDIT button:

Starts editing when pressed together with PLAY button.

PLAY button:

Starts playback.

REC button:

Starts recording when pressed together with PLAY button.

PAUSE/STILL button:

Establishes still-picture mode during playback and pause mode during recording.

EJECT button:

Ejects cassette.

REW (PAGE DOWN) button:

Rewinds the tape; scrolls down page in MENU mode.

STOP (DATA) button:

Stops all operations; sets data in MENU mode.

FF (PAGE UP) button:

Rapidly advance the tape; scrolls up page in MENU mode.

SEARCH (SET) button:

Executes and releases search; sets menu in MENU mode; sets standard level in TBC set mode.

SEARCH/JOG dial:

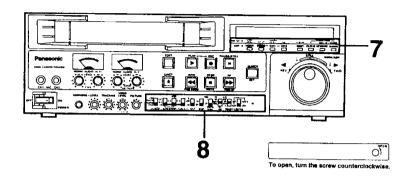

Adjusts search speed (outer dial for SHUTTLE mode; inner dial for JOG mode); selects menu in MENU mode; sets level

in TBC set mode.

......

*Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.

""DOLBY" and the double-D symbol DC are trademarks of Dolby Laboratories Licensing Corporation.

7. Editing mode setting area/TBC mode setting area

ASSEMBLE (VIDEO LEVEL) button: Sets assemble editing; sets video level in TBC mode.

INSERT VIDEO (SET UP) button: Performs insert editing of video signals and Hi-Fi audio signals; sets setup level in TBC mode.

INSERT AUDIO-CH1 (CHROMA LEVEL)

button: Performs insert editing of normal audio CH1; sets chroma level in TBC mode.

INSERT AUDIO-CH2 (HUE) button: Performs insert editing of normal audio CH2 or TC; sets hue in TBC mode.

RESET (YC DELAY) button: Resets counter; sets YC delay in TBC mode.

CTL/TC/UB (SYSTEM H PHASE) button: Switches counter mode; sets system H phase in TBC mode.

LTC/AUTO/VITC (SYSTEM SC PHASE
FINE) button: Switches time code read mode; sets system SC phase fine
adjustment in TBC mode.

ON SCREEN (SYSTEM SC PHASE

COARSE) button: Displays data on monitor TV; sets system SC phase coarse

8. Function setting area

CH2 METER switch: Switches between tracking/video meter and audio CH2.

AUDIO MONITOR switch: Selects monitor audio channel.

AUDIO MONITOR (METER) switch: Switches monitor audio type.

AUDIO OUT switch: Switches output audio type.

INPUT switch: Switches video input signal.

DNR switch: DNR operation switch (Y and C levels set using the setup menu)

menu).

DIGITAL SLOW switch: Changes digital slow setting and dial speed mode.

DIGITAL SLOW switch:
Changes digital slow setting and dial speed mode.

DIAL MODE switch:
Switches search dial mode.

Switches search grant when CONTROL switch is switches.

 Switches memory mode when CONTROL switch is set to "LOCAL"; switches editing mode when CONTROL switch is set

to "REMOTE" (34-pin controller only).

CONTROL switch: Switches between remote and local modes

Counter display parts

When the DIAL MODE switch is at the SEARCH position:

Mode	Counter Display	Remarks
CTL	-8:88:88:88	The shaded area remains blank for CTL interpolation
TC	88:88:88:88	while a colon appears in the non-drop frame mode and a period indicates the drop
UB	88 88 88	frame mode.

When the DIAL MODE switch is at the MENU position:

Mode	Counter Display	Remarks
SELECT PAGE	5 <i>u 88 88</i>	The shaded area flashes on and off.
SET PAGE	5 <i>U:88 88.<mark>88</mark></i>	
TC PRESET	88:88:88:88	The input digits flash on and off.
UB PRESET	88 88 88 88	

Hour meter display

The following items area indicated alternately while the RESET button is kept depressed

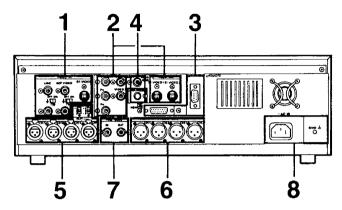

Mode		Coun	ter Displa	ıy	Remarks
Capstan rotation cumulative time	Ĺ	88	88	8 8	Set the CONTROL and DIAL MODE switches to
Total drum rotation time	đ	88	88	84	REMOTE and MENU, respectively.

VITC position display

The following items are displayed while the RESET button is kept depressed

Mode	Counter Display	Remarks
When reading of VITC position was possible	88.88 £	Set the CONTROL and DIAL MODE switches to REMOTE and SEARCH.
When reading of VITC position was not possible	L	respectively.

Rear panel parts

1. Video input signal area

S1-VIDEO IN connector: S1-VIDEO signal input connector.

REF VIDEO IN connector: Input connector for external reference signal (with loop-through 75 Ω termination switch).

LINE IN connector: \cdots Video signal input connector (with loop-through 75 Ω termination

switch).

2. Video output signal area

S1-VIDEO OUT (1, 2) connectors: S1-VIDEO signal input connector.
VIDEO OUT (1, 2) connectors: Video signal output connectors.

COMPONENT OUT connectors: Component signal output connectors.

3. Remote signal area

TBC REMOTE connector: Connector for TBC remote controller.

REMOTE 9P connector: Connector for editing controller (9P).

4. Monitor output signal area

VIDEO connector:

Output connector for video monitor signal.

Output connector for audio monitor signal.

5. Audio input signal area

Input audio level switches: Set input level to -60/+4 dB.

NORM/Hi-Fi audio input connectors: NORM/Hi-Fi audio (CH1/2) input connectors.

Hi-Fl audio input connectors: Input connectors for hi-fi sound only.

6. Audio output signal area

NORM/Hi-Fi audio output connectors: NORM/Hi-Fi audio (CH1/2) output connectors.

Hi-Fi audio output connectors: Output connectors for hi-fi sound only.

7. Time code signal area

TIME CODE IN connector: Time code signal input connector.

TIME CODE OUT connector: Time code signal output connector.

3. Power supply circuit area

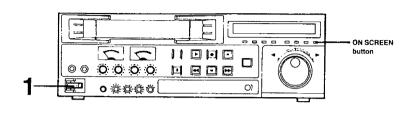

GND terminal: When connecting this unit to any other component, make

absolutely sure that it is properly grounded by connecting this

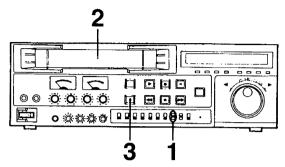

terminal

AC IN socket: Selected to AC 120V power outlet.

Switching on the power

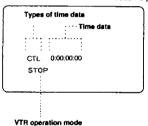

Installing a cassette

Press the POWER switch.

The power is now supplied to the unit.

 The display below appears through VIDEO MONITOR OUT connector if the ON SCREEN button is pressed.

This appears only when item No. 4004 of the dial menu function is ${\sf ON}.$

 If an error appears on the display, stop operation immediately and read page 61.

1. Set the DIAL MODE switch to SEARCH.

 When the DIAL MODE switch is at "MENU", operations not relating to the dial menu functions cannot be performed; when it is at "TBC SET", operations other than PLAY, STOP, FF, REW, EJECT, REC, PAUSE, EDIT cannot be performed.

2. To install the cassette tape:

Insert the tape in the slot provided and push the center area of the cassette gently.

The cassette "in" lamp now lights in the function display lamp area.

3. To remove the cassette tape:

Press the EJECT button. Draw the emerging cassette tape out straight toward you.

The cassette "in" lamp now goes off.

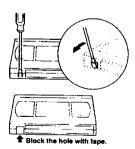

MEMO

To prevent accidental erasure of recorded material:

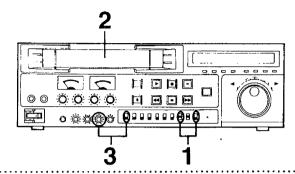

Break out the tab to prevent further recording.

To re-record:

Block the tab hole with cellophane tape.

Recording

Set the switches (see pages 22 to 24).

CONTROL switch → LOCAL
DIAL MODE switch → SEARCH

Install the cassette tape (see page 13).

Check that the tab on the recording tape for preventing accidental erasure has not been broken out.

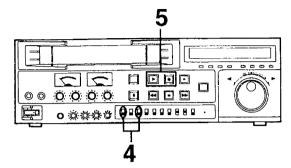

- 3. Adjust the recording level.
- [1] Set the CH2 METER switch to "VIDEO TRACKING."
- [2] Automatic adjustment Press in the VIDEO LEVEL control. The recording level will now be adjusted automatically.
- [3] Adjustment to desired level Pull out and turn the VIDEO LEVEL control.

The appropriate recording level is where "0" is indicated on the level meter.

 The AUDIO CH2 level meter indicates the recording level during recording.

- 4. Adjust the audio recording level.
- [1] Set the CH2 METER switch to "AUDIO CH2."
- 21 Select the type of sound whose level is to be adjusted.

Use the METER switch for this.

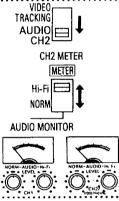

HI-FI: The meter displays the hi-fi audio level.

NORM: The meter displays the normal audio level.

[3] Level adjustment

Rotate the level controls and set them to the highest possible value where the pointers do not pass beyond the "0" position on the level meters.

 Set the "AUDIO LIMITER" (item No. 3002) dial menu function to "OFF" before proceeding with the normal audio level adjustment.

Press the REC and PLAY buttons together.

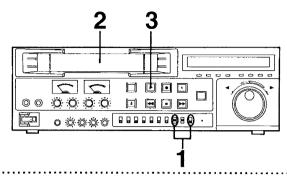

Recording now starts.

MEMO

- The dial menu functions are used to activate the audio limiter function and Dolby NR system (see page 42).
 When the audio limiter function is activated, the automatic volume limiter circuit operates to ensure that the sound is recorded without distortion even if the input level should reach an excessively high level during recording.
- The Dolby NR system ensures that the sound is recorded and played back with reduced tape noise (hiss).
- When recording Hi-Fi sound, set the "HI-FI REC" (item No. 3003) dial menu function to "ON".
- When the Hi-Fi sound is not to be recorded, it is not enough merely to set the level control to the "0" position. Be sure to set the "HI-Fi REC" (item No.3003) dial menu function to "OFF".
- The Hi-Fi audio input connectors can be switched using the "HI-FI INPUT SELECT" (item No. 3004) dial menufunction.
- To make a recording using an external sync signal, set the "SYNC" (item No.1001) dial menu function to "EXT".

Playback

CONTROL switch → LOCAL DIAL MODE switch → SEARCH

Install the cassette tape (see page 13).

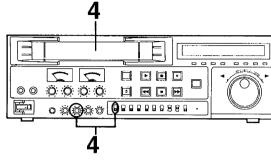

Install the tape with the recorded sound and pictures which are to be played back.

Press the PLAY button.

Playback now commences.

4. Adjust the tracking.

- Set the CH2 METER switch to "VIDEO TRACKING."
- 2) Normally,

the TRACKING control is set to its center "fix" position for playback.

CH2 METER

When playing back a tape which has been recorded on another VTR,

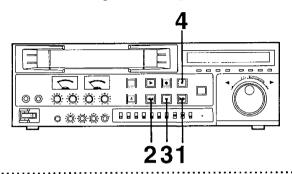

turn the TRACKING control slowly to the left or right and set so that the meter pointer deflects to the maximum.

NOTES

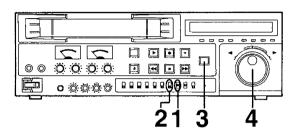

- Set the Dolby NR system ON using the dial menu function when playing back a tape which has been recorded using the system (see page 42).
- If the tracking shifts out of alignment during playback, the Hi-Fi lamp will go out and the Hi-Fi sound will not be output even if it was recorded.
- When using the headphones:
- The volume level may change when high-impedance headphones are connected.
- To playback a signal using an external sync signal, set the "SYNC" (item No. 1001) dial menu function to "EXIT".

FF, REW stop and pause/still

Search operations

1. Fast forwarding the tape

Press the FF button.

Rewinding the tape

Press the REW button.

Stopping the tape

- Press the STOP button.
- The STOP button lights and all operations are stopped.
 When the "PB/EE SELECT" (item No. 2004) dial menu function is set to "EE", E-E pictures will appear on the TV monitor.

4. Pause

Press the PAUSE/STILL button during recording or playback.

- During playback, the unit is placed in the PLAY/STILL mode and still pictures are played back.
- During recording, the unit is placed in the REC/PAUSE mode and recording is temporarily suspended.

NOTES

- · Set the CONTROL switch to LOCAL.
- · Set the DIAL MODE switch to SEARCH.
- The unit is automatically placed in the tape protection mode if the STOP or PAUSE/STILL mode should continue beyond a certain period of time (which can be set using the item No. 1002 to 1004 dial menu function). (See page 39.)

1. Set the DIAL MODE switch to "SEARCH".

Set the DIGITAL SLOW switch to "1" or "OFF".

Press the SEARCH button.

The SEARCH button, PLAY button and PAUSE/STILL button light, indicating that a search can now be performed.

4. Operate the search dial.

The inner dial is used for the jog mode and the outer dial for the shuttle mode.

 When the dial is turned toward the right, the tape is played back in the forward direction (the FWD lamp lights); conversely, when it is turned toward the left, the tape is played back in the reverse direction (the REV lamp lights).

[1] JOG mode

Turn the outer dial to the center position. The tape is played back at a speed ranging from a still picture to ±1x the normal speed depending on the speed at which the inner dial is turned. When the truning of the dial is stopped, a still picture display appears regardless of the switch setting.

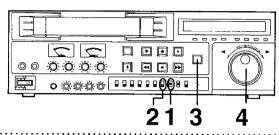

27 SHUTTLE mode

in response to the angle to which the outer dial is turned, the tape can be played back at a speed ranging from 0 to 32x faster or slower than normal tape speed. (However, when the tape approaches the end, the low-speed search mode is established in order to protect the lape from possible damage.) A still picture results at the center (click-stop) position.

NOTES

- . Keep the CONTROL switch at the LOCAL position.
- When the power has been turned on again in the SHUTTLE mode, first return the dial to its center (click-stop)
 position and then proceed to operate it.
- When setting the direct search mode, set the "DIRECT SEARCH" (item No. 1005) dial menu function to "ON." (See page 39.)

Slow-motion playback

1. Set the DIAL MODE switch to "SEARCH".

2. Set the DIGITAL SLOW switch to "2".

3. Press the SEARCH button.

The SEARCH button, PLAY button and PAUSE/STILL button light, indicating that a search can now be performed.

4. Operate the search dial.

The inner dial is used for the jog mode and the outer dial for the shuttle mode.

- When the dial is turned toward the right, the tape is played back in the forward direction (the FWD lamp lights); conversely, when it is turned toward the left, the tape is played back in the reverse direction (the REV lamp lights).
- [1] JOG mode

Turn the outer dial to the center position. The tape is played back at a speed ranging from +1/4x to +1x the normal speed depending on the speed at which the inner dial is turned. When the truning of the dial is stopped, a still picture display appears regardless of the switch setting.

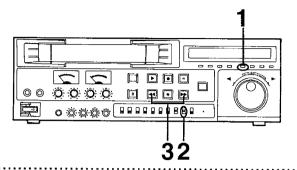

The tape is played back at speeds ranging from -1/4x to +1x normal speed, depending on the angle to which the outer dial is turned.

- · Keep the CONTROL switch at the LOCAL position.
- When the power has been turned on again in the SHUTTLE mode, first return the dial to its center (click-stop)
 position and then proceed to operate it.
- When setting the direct search mode, set the "DIRECT SEARCH" (item No. 1005) dial menu function to "ON." (See page 39.)
- · Noise may occur when a tape is played back in the reverse direction.

AUTO STOP function

 Press the RESET button at the position where the tape is to be automatically stopped.

The tape counter displays "0:00:00:00."

Set the MEMORY switch to AUTO STOP.

Proceed with fast forward or rewinding.

The tape automatically stops when the tape counter display nears the "0:00:00:00" mark.

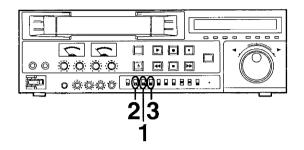

NOTE

- The AUTO STOP function does not work when:
- The CONTROL switch is at the "REMOTE" position.
- The CTL/TC/UB button is at any position except "CTL."
- DIAL MODE switch is at the "MENU" position.

20

മ

Setting the audio switches

Setting the AUDIO MONITOR (METER) switch

This is used to select the sound displayed on the level meter and the sound which is output from the headphones jack on front panel or the AUDIO MONITOR connector on the rear panel.

Hi-Fi: Hi-Fi sound is selected. NORM: Normal sound is selected.

Setting the AUDIO MONITOR switch

This is used to select the audio channel for the sound output from the headphones jack on front panel and the AUDIO MONITOR connector on the rear panel.

The CH1 sound is output.

Mixed CH1 and CH2 sound is output from the headphones jack CH1 sound is heard at the left and

CH2 sound at the right. The CH2 sound is output.

· No sound will be heard from normal audio CH2 when the "AUDIO CH2" (item No. 3006) dial menu function is set to

Setting the AUDIO OUT switch

This is used to select the sound which is output from the AUDIO OUT (NORM/Hi-Fi) connectors on the rear panel.

Hi-Fi: Discriminates between Hi-Fi and normal audio automatically. When there is no Hi-Fi audio output signal, normal audio will be automatically outputted.

NORM: Normal sound is selected.

AUDIO MONITOR

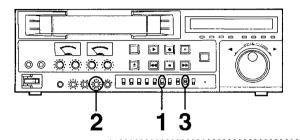

AUDIO OUT

NOTE

- Set "HI-FI REC" (item No. 3003) dial menu function to "ON", to record Hi-Fi sound.
- ON: Hi-Fi sound and normal sound are recorded.

OFF: Normal sound is recorded.

Setting the video switches

Setting the DNR (digital noise reducer) switches

- When playing back a tape with a reduced signal-to-noise ratio, these switches can be used to reduce the noise level as warranted by the picture quality. (However, a slight deterioration in the resolution will result.)
- Keep this switch OFF during editing. The picture may be disturbed if a tape is repeatedly edited.
- Bear in mind that when material is dubbed repeatedly in the DNR ON mode, after-imaging will be prevalent.
- The degree of S/N ratio enhancement can be controlled by setting dial menu function item No. 2013 and 2014.

Setting the VIDEO LEVEL control

This is used to adjust the video level automatically during recording.

PUSH: The video level is automatically adjusted. PULL: The video level not automatically adjusted.

Setting the MEMORY switch

Set the CONTROL switch to "REMOTE." The switch then can be used to select whether the unit functions as source or as an editor, using the 34P controller.

PLAY: Unit functions as a player. EDIT: Unit functions as an editor.

. Keep the switch at PLAY when the unit is to be used on its

MEMORY CONTROL

Setting the INPUT switch

During editing this switch is set to the position corresponding with the input signal.

S-VIDEO: When recording video signals which have been

input to the S1-VIDEO IN connectors. When recording video signals which have been

input to the VIDEO IN connectors.

Setting the CONTROL switch

This is used to set the unit's control mode.

REMOTE: Set to this position for operating the unit by remote control using an controller, etc. Only the unit's eject

function will now be operational.

LOCAL: Set to this position to operate the unit.

. The operation modes of this unit in the REMOTE mode can be set using dial menu item No. 5001.

Setting the DIGITAL SLOW switch

Activates the noiseless slow mode. The search dial range is -1/4x to +1x.

Activates the noiseless slow mode. The search dial range is -32x to +32x.

OFF: The noiseless slow mode is not activate.

SLOW

Setting the ON SCREEN button

This is used to add a time code or other superimpose signal to the video signal which is output from the VIDEO MONITOR connector.

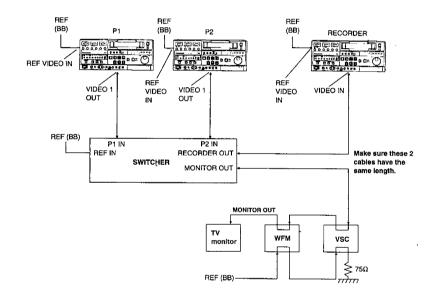

TBC Adjustments

The TBC can be used to reduce the amount of jitter and distortion called skew (a phenomenon where the top part of the picture is bent horizontally).

For AB roll editing (a method of editing using two source units) using an editor, the TBC must be adjusted after it has been connected to the system so that the material will be edited accurately and error-tree. (The TBC must be readjusted every time its connecting cable is replaced or its connections are changed.)

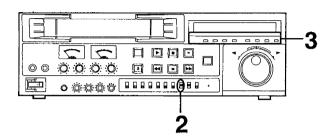

Make the connections as shown in the figure below.

- [1] Supply the external reference signal from the sync signal
 - Provide a composite connection for the video signals.

.....

TBC Adjustments (cont.)

Set the DIAL MODE switch to "TBC SET."

■ The TBC SET menu (Menu No.1) is output on the monitor.

Notes

The first menu is not output if "TBC REMOTE" (item No. 2015) dial menu function is set to "REMOTE".

Either set "TBC REMOTE" to "LOCAL" or use an external TBC encoder to perform adjustment.

Menu No.1 TBC CONTROL 1. VIDEO LEVEL 2. SET UP 3. CHROMA LEVEL 4. HUE 5. YC DELAY

8. SYSTEM SC PHASE COARSE

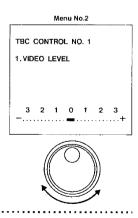

6. SYSTEM H PHASE 7. SYSTEM SC PHASE FINE

3. Proceed with the discrete adjustment.

Since the TBC of this unit has already been adjusted using standard color bars, the control is normally used set to "0." If readjustment is to be required with the tape being used, proceed as follows.

- The various items correspond to the eight switches (TBC mode setting area) below the display tube, in order starting from the left.
- [1] Playback a tape with color bars recorded on it.
- [2] Adjust the various items.

Press the switch corresponding to the item you wish to adjust (TBC mode setting area) and Menu No.2 is displayed. Make adjustments by turning the JOG dial to move the cursor to the right or left.

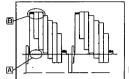

NOTE

· No adjustments can be made on the TBC SET screen menu when the screen has stopped.

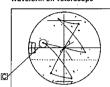

[3] Adjust the various items.

Adjust the various items so that the displays on the waveform monitor (WFM) and vectorscope (VSC) appear as described below.

Waveform on waveform monitor

Waveform on vetorscope

A: • Set-up level

Adjust to eliminate any deviation.

B: • Video level Adjust to 100IRE.

C: • Chroma level

Adjust so that the specified level is obtained.

• Hue

Adjust so that the vector waveform traces are positioned inside the ⊞ mark on the

[4] Adjust the YC delay control.

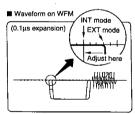

(Normally, adjustment is unnecessary.)
Adjust this to compensate for a shift in YC delay (color shift)
of the tape being played back. Each step represents an
adjustment of approx. 70ns.

[5] Adjust the SYSTEM PHASE controls.

- Playback the standard color bars on VTR P1.
- Adjust the SYS PHASE controls on VTR P1. Adjust them so that the waveform shown below appears on the waveform monitor (WFM).
- Set the WFM to the INT mode and set the expansion to 0.1 us.
- 2) Check the horizontal sync position.
- Now set the WFM to the EXT mode.
- 4) In the EXT mode adjust the SYS PHASE controls so that the H SYNC signal is aligned with the position above. First adjust H. then use SC COARSE for the overall

adjustment and SC FINE for the fine adjustment.

5) Adjust the SYS PHASE controls on VTR P2 similarly.

(Pay close attention to the sync signal rise.)

Description of adjustments

VIDEO LEVEL: Adjusts the video level. SET UP LEVEL: Adjusts the set-up level. CHROMA LEVEL: Adjusts the chroma level. YC DELAY: Adjusts the YC level.

SYSTEM H PHASE: Adjusts the phase of the horizontal sync signal from the built-in sync generator to the external reference signal supplied from

the external source in order to achieve genlock.

SYSTEM SC PHASE: Adjusts the phase of the subcarrier signal from the built-in sync generator to the external reference signal supplied from the

external source in order to achieve genlock.

FINE: Continuous adjustment, range of just over 90'

Together, these controls cover a 360°.

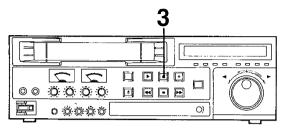

After completing TBC adjustments. set the DIAL MODE switch to

NOTES

"SEARCH."

- Pressing the SEARCH (SET) button when the Menu No. 1 is displayed returns the settings for all items, except for SYSTEM PHASE, to their initial values.
- Pressing the SEARCH (SET) button when Menu No. 2 is displayed returns only the setting for that item to its

"Editing" consists in taking pre-recorded tapes, combining various material into one part, cutting out the parts which are not desired and connecting only what is required into a single program. There are two editing modes: assemble and insert. Complete the operations listed below before proceeding with editing.

(CTL editing is the type of editing which is possible when only this unit is used for editing. Time code editing is not possible.)

Complete the adjustments and settings (see page 22 to page 28).

Check whether the FRAME LOCK lamp lights when the following steps are taken.

- Playback the tape which is to be edited.
- Use the TRACKING control on the source unit so that the TRACKING meter pointer deflects to
- Set the TRACKING control on the editor to its center clickstop position.
- [4] Set the "FRAME SERVO" (item No. 6005) dial menu function on the editor unit to "ON".
- Check that the FRAME lamp at the source unit side has lighted.
 - If the lamp is off, set the "SYNC" (item No. 1001) dial menu function on the editor to "NORM".
- Check that the FRAME lamp on the editor has lighted.
 - If the FRAME lamp is off, the edited pictures may be thrown into disarray.

The material to be edited can be checked on the TV monitor.

Press the REC button while playback is in progress.

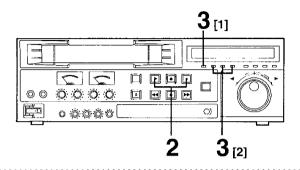

E-E pictures can be viewed while the REC button is depressed. Signals are not recorded onto the tape.

. E-E pictures cannot be viewed if a cassette has been inserted without its accidental erasure prevention tab.

28

Selecting the editing mode

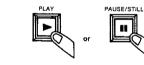

Proceed first with the editing preparations.

Refer to "Before proceeding with editing" on the previous page for details

2. Set the unit to the PLAY or PLAY/STILL mode.

Press the PLAY button or PAUSE button.

- 3. Select the editing mode.
- [1] Assemble editing

Press the ASSEMBLE button.

When it is pressed once, the button lights; when it is pressed again, its light goes off.

[2] Insert editing

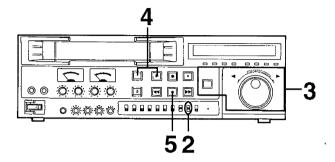

Select the INSERT (VIDEO, AUDIO-CH1, AUDIO-CH2) button corresponding to the editing.

When it is pressed once, the button lights; when it is pressed again, its light goes off.

Insert editing applies only to the signals for the button which has lighted.

Executing manual editing

1. Select the editing mode.

Refer to "Selecting the editing mode" on the previous page for details

Set the MEMORY switch to OFF.

If this switch is at the AUTO (CUT OUT) position, editing will be cut out and stopped when the counter display shows "0:00:00:00."

Find the edit start point by conducting a search operation and place the unit in the still picture mode.

Refer to page 19 for details on search operations.

 Press the PLAY button while pressing down the EDIT button.

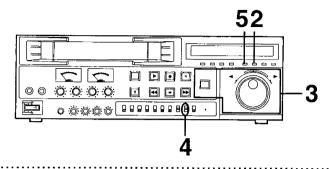

The tape jogs back automatically for about 3 seconds, and editing commences.

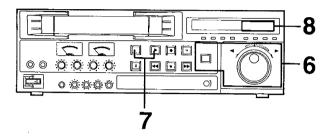

Press the STOP button to stop editing.

AUTO CUT OUT editing (simple automatic editing)

1. Select the editing mode.

Refer to "Selecting the editing mode" on page 29 for details.

2. Set to CTL mode with the CTL/TC/UB

Press the CTL/TC/UB button to switch to the CTL mode.
"Each press of the button causes one of the function indicator
/ lamps, "@TL," "TC" or "UB," to light.

•••

 Find the edit start point by conducting a search operation and place the unit in the still picture mode.

Refer to page 19 for details on search operations.

 Find the edit end point by conducting a search operation and place the unit in the still picture mode.

Refer to page 19 for details on search operations.

Press the PLAY button while pressing down the EDIT button.

The tape jogs back automatically for about 3 seconds, and editing commences.

4. Set the MEMORY switch to AUTO (CUT OUT).

MEMOR

End of editing

When the tape counter reaches "0:00:00:00," editing will be automatically cut out.

 With insert editing, the tape is rewound automatically in the vicinity of the cut out point.

Press the RESET button.

The tape counter is reset to "0:00:00:00." The corresponding place on the tape is the edit end point.

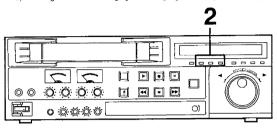

32

귥

Split editing

"Split editing" consists in changing the editing signals during insert editing.

Execute insert editing.

See page 30 for details.

Change the editing signals.

Example of operation: Adding and inserting the AUDIO CH1 sound during the insert editing of the VIDEO/Hi-Fi signals

Insert editing of the VIDEO/Hi-Fi signals in progress

Press the AUDIO CH1 button.

The AUDIO CH1 sound is insert-edited.

Press the AUDIO CH1 button again.

The insert-editing of the AUDIO CH1 sound is terminated.

NOTES

- The editing mode cannot be switched to assemble editing while insert editing is in progress.
- The editing mode cannot be switched to insert editing while assemble editing is in progress.
- . The editing signals cannot be switched during the approximately 3-second long AUTO BACK operation or while the tape is traveling in preparation.

Precautions for editing

If the EDIT START button is pressed without the editing mode having been set, the edit mode buttons (ASSEMBLE, VIDEO Hi-Fi, AUDIO CH1, AUDIO CH2) flash 6 times to prompt the operator to select the mode.

Due to the preroll requirements, a pre-recorded section lasting at least 3 seconds must precede the edit start point. Editing cannot be conducted from the very start of the tape.

Normally, the controller's preroll time is set to 5 or more seconds. However, when phase-synchronized editing is not to be performed, editing is possible with a 3-second preroll time by using an external sync signal (EXT).

Precaution for assemble editing

■ Bear in mind that about 2 seconds of the original recording after the edit end point will be erased.

Precautions for insert editing

- The picture will be thrown into disarray at the edit start and end points if insert editing is conducted using the VHS system on a tape which has been recorded using the S-VHS system.
- Since the control signal is used for the editing, make sure that the edit period does not extend beyond the recording made on the tape.

Precautions for EE picture

NON V-FLOAT: The positions of the external sync signal and EE picture's V-SYNC signal taily. The video start line is delayed by an amount equivalent to the time taken by the Time Base Corrector

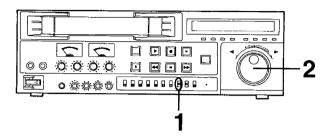

V-FLOAT:

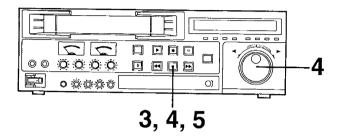

The positions of the external sync signal and EE picture's V-SYNC signal do not tally but the

proper relationship between the video start line and V-SYNC signal is maintained.

- With the "SYNC" (item No. 1001) dial menu at "EXT," the NON V-FLOAT mode is established when the MEMORY switch is at "PLAY" and the V-FLOAT mode is established when the MEMORY switch is at "EDIT."
- At the V-FLOAT position, the EE picture may move slightly in the perpendicular direction.

Using the dial menu functions

1. Set the DIAL MODE switch to MENU.

This disables all operations except those relating to the dial menu functions.

(This unit remains in the mode which was established before the dial menu functions were displayed.)

The following appears on the display.

The SETUP-MENU screen appears on the monitor which is connected to the MONITOR VIDEO connector. The monitor display shows the following.

SETUP-MENU NO. 1001

01 SYNC — Flashing display
02 STILL TIME SELECT
03 TAPE PROTECTION
04 READY OFF MODE SELECT
05 DIRECT SEARCH
06 SHORT FF
07 AUTO REW

The set-up change screen is displayed while the STOP button is kept depressed.

The following appears on the display.

The monitor display shows the following.

SETUP-MENU NO. 1001-00
01 SYNC
NORM
Flashing display

4. Turn the JOG dial while pressing the STOP button.

The flashing display changes. Set the item to the desired value.

2. Turn the JOG dial and locate the setting item

When it is turned clockwise, the number is successively incremented from 1001 \rightarrow 1002 \rightarrow 1103 \rightarrow etc. Conversely, when it is turned counterclockwise, the number is successively decremented. (The selected item is indicated by flashing.)

 Press the FF (page up) or REW (page down) button to scroll the menu up or down in 1-page units.

Release the STOP button.

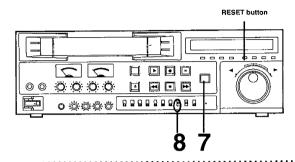

•

NOTE

• The setting method differs for item No. 2008, 7010 and 7011. (See page 47.)

Using the dial menu functions (cont.)

6. Repeat steps 3 to 5.

Set all the items whose set-up is to be changed to the desired value

Upon completion of the settings, press the SEARCH (SET) button.

The set-up changes are now entered, and the following message appears.

■ The display indication returns to the normal counter indication.

8. Return the DIAL MODE switch to SEARCH.

The normal screen is returned.

 If the switch is returned to SEARCH without the SET button having been pressed in step 7, the settings will not be extered.

МЕМО

 To return set-up items to their original (factory-set) settings, press the RESET button when the SETUP-MENU is indicated. The following message appears.

SETUP-MENU INIT. SET OK ? (PUSH PLAY KEY)

The values are restored to their original settings when the PLAY button is pressed.

Set-up menu screen

Operation/function set-up items

	ltem		Set-up value	Description of function
No.	Superimpose display	No.	Superimpose display	Description of function
1001	SYNC	01	NORM EXT	Selects the sync signal. 00: Synchronization with the input video signal. 01: Synchronization with the external sync signal.
1002	STILL TIME SELECT	00 01 02 03	2 SEC 30 SEC 1 MIN 5 MIN	When the unit is in the STOP or STILL mode, this selects the duration of time after which the unit is automatically placed in the TAPE. PROTECTION mode in order to protect the tape. The setting is valid from the next time the STOP or STILL mode is activated.
1003	TAPE PROTECTION	00	READY OFF AUTO ADVANCE	Selects the operation to be performed in the TAPE PROTECTION mode. The setting is valid from the next time the TAPE PROTECTION mode is activated. 00: The READY OFF mode is established. 101: Each time the duration specified by the STILL TIME SELECT setting elapses, the tape is advanced three frames, and the unit enters the READY OFF mode approximately 30 minutes later.
1004	READY OFF MODE SELECT	00 01 02	DRUM ROTATE DRUM STOP UNLOADING	Selects the operation in the READY OFF mode. 00: Drum rotates due to loose tape. 01: Drum stops due to loose tape. 02: Unloading
1005	DIRECT SEARCH	00 01	OFF ON	Selects the direct search mode. 00: Normal search operation 10: Unit is automatically placed in the search mode when the search dial is operated even without the search button being pressed.
1006	SHORT FF	00 01	OFF ON	Selects the short FF function. 00: No short FF operation. 01: Short FF operation is conducted at tape start.
1007	AUTO REW	00 01	OFF ON	Selects the auto rewind function. 00: Stops at tape end. 01: When the tape reaches the end, it is automatically rewound to the start and the unit stops operating.
1008	AUTO BACK	00	OFF ON	Sets the auto back space recording function. 00: Normal recording/pause mode 01: When the REC button is pressed in the PLAY/STILL mode or if the PAUSE/STILL button is pressed during recording, the tape is rewound for about 3 seconds and the unit is placed in the standby mode. When the PAUSE/STILL button is then pressed, the unit conducts playback for 3 seconds and then recording commences.

Video set-up items

	item		Set-up value	D
No.	Superimpose display	No.	Superimpose display	Description of function
2001	IMAGE MODE SELECT	00 01	NORMAL EDIT	O: Select this setting for normal operation. The noise canceler and CAC function operate for both the luminance and chrominance signals. O1: Select for editing.
2002	VIDEO MODE	00 01	COLOR B/W	Selects the color mode of the input video signal. 00: Automatically detects color mode by the input signal. 01: Forces black-and-white mode operation.
2003	Y/C FILTER TYPE	00	ADAPTIVE 3D 2D	Select the Y/C separation system. 00: The adaptive 3-dimensional Y/C separation mode is established. 01: The 3-line Y/C separation mode is established.
2004	PB/EE SELECT	00 01	PB/EE EE	Sets the image that appears on the screen when the unit is in the STOP mode. 00: The playback image is output. 01: The EE image is output.
2005	WIDE MODE SELECT	00 01 02	AUTO WIDE NORMAL	Sets the unit's operation for WIDE IDs. O0: Records a WIDE ID on the tape when wide data is encountered in the input signal during recording. During playback, wide data is added to the Y and C output signals if there is a WIDE ID on the tape. O1: Appends wide data to the Y/C output signal and records a WIDE ID on the tape during recording. O2: No wide data is accepted.
2006	S-VHS REC	00 01	OFF ON	Selects the recording format. 100: Recording are made in VHS format. 101: Recording are made in S-VHS format. (With an S-VHS tape only)

Time code set-up items

	Time dode set up items				
Item		Set-up value		Description of function	
No.	Superimpose display	No.	Superimpose display	Description of function	
7009	UB BINARY GROUP FLAG	00	NOT SPECIFIED	Selects the way the user's bit is used using TCG generation.	
		01 02 03	ISO CHARACTER UNASSIGNED 1 UNASSIGNED 2	Not character set specified. He bit character set conforming to ISO646 and ISO2022. Undefined. Undefined.	
7010	TIME CODE PRESET	00	TCG preset value is set while observing the screen.	Sets preset value of time code generator. 00:00:00:00~23:59:59:29	
7011	U-BIT PRESET	00	UBG preset value is set while observing the screen.	Sets preset value of user's bit. 00:00:00:00~FF:FF:FF:FF	
7012	9P VITC TO DUMMY LTC	00 01	OFF ON	Selects the response from 9P to CURRENT TIME SENSE when CH2 is set to "AUDIO." 00: REQUEST TIME DATA MISSING is returned. 01: VITC data is returned as LTC.	
7013	9P INTERPOLATED VITC	00 01	HOLD VITC INTERPOLATED LTC	Selects the response method used to return the VITC CTL interpolation value from 9P in response to CURRENT TIME SENSE. 00: HOLD_VITC (74H 16H) is returned. 01: INTERPOLATED_LTC (74H 14H) is returned.	

2008/7010/7011 setting method

- 1. Press the STOP button at item No. 2008, 7010 or 7011.
- 2. Turn the JOG dial and move the display to be changed (flashing display).
- The ON and OFF will switch for item No. 2008, and the value will change for item No. 7010 and 7011 when the JOG dial is turned while the STOP button is kept pressed.
- 4. Press the SEARCH (SET) button upon completion of the settings.
- The present time code value is displayed as the initial value for item No. 7010 and 7011. When the RESET button is pressed, it will be reset to "00:00:00:00."
- Operation is not possible for item No. 7010 and 7011 unless the "TC INT/EXT SELECT" (item No. 7001) dial menu function set to "INT" and "TC MODE" (item No. 7002) dial menu function is set to "REC RUN" or "FREE RUN."
- Once the setting mode is entered for item No. 2008, 7010 or 7011, operation cannot be returned to the setting mode of any other item. When the SEARCH (SET) button is pressed upon completion of the setting, the change made to the previous setting for the item will be entered. On the other hand, when the DIAL MODE switch is set to SEARCH without pressing the SEARCH (SET) button first, all the settings including the one which was made previously will be canceled.

Time Code/user's bit

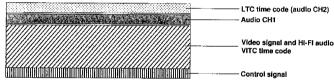

Time code

The "time code," which is based on the time code signal generated by the time code signal generator, recorded on tape, and read out by the time code signal reader, is used to display absolute positions on the tape in units of "hours:minutes:seconds:frames." Knowing an absolute position makes it possible to conduct editing accurately and search operations speedily.

There are two types of time codes: LTC (longitudinal time code) and VITC (vertical interval time code). The LTC is recorded on the tape's normal audio CH2 track. It is used to record the position information on the tape and user's bit information.

The VITC is recorded in the vertical blanking period of the video signals so that even without using the normal audio CH2 track, it is used to record the information regarding position on the tape and user's bit information.

Tape

The time code itself is indicated on the display and superimpose on the TV monitor.

User's bit

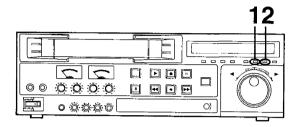

48

Among the time code signals, the "user's bit" is an information released to the user. It is used to record the operator number or real time.

LUBR AB CD EF 88

A total of 16 characters—numbers 0 to 9, A, B, C, D, E and F—can be used for the user's bit. (The characters "B" and "D" are displayed in small letters in the counter display.)

Setting the time code switches

Setting the CTL/TC/UB button

l his disp	selects the time code mode which is indicated on the lay.	CTL/TC/ŪB
CTL	,	
TC:	The time code value is indicated.	
UB:	The user's bit value is indicated.	

2. Setting the LTC/AUTO/VITC button

This selects the read out mode of the time code.

LTC: The LTC time code signal recorded on linear track CH2 is read out.

AUTO: Priority is given to reading out the VITC signal when in the slow mode, and to reading out the LTC signal at all other times.

VITC: Only the VITC signal is read out.

 Interpolation is provided by the CTL signal when it is no longer possible to read out the time code signal in any of the modes.

3. Settings with the dial menu functions

The time code set-up can be performed using dial menu function item No. 7001 to 7009. (See pages 46, 47.) The preset values for the time code and user's bit can be set using dial menu function item No. 7010 and 7011.

LTC/AUTO/VITC

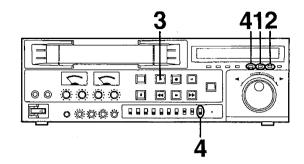

Recording the time code/user's bit

- 1. Recording the optional (preset) time code/user's bit
- [1] Set the "TC INT/EXT SELECT" (item No. 7001) dial menu function to "INT." (See page 46.)
- [2] Set the "TC MODE" (item No. 7002) dial menu function to "REC RUN." (See page 46.)
- [3] Set the preset value using dial menu function item No. 7010 or No. 7011. (See page 47.)
 - Set the "AUDIO CH2" (item No. 3006) dial menu function to "OFF" when the LTC time code is not to be recorded. (See page 42.)
 - Set the "VITC REC" (item No. 7003) dial menu function to "OFF" when the LTC time code is not to be recorded (See page 46.)

2. Recording the continuous time code on the editing tape

- [1] Set the "TC INT/EXT SELECT" (item No. 7001) dial menu function to "INT." (See page 46.)
- [2] Set the "TC MODE" (item No. 7002) dial menu function to "REGEN." (See page 46.)
 - Set the "AUDIO CH2" (item No. 3006) dial menu function to "AUDIO" when the LTC time code is not to be recorded. (See page 42.)
 - Set the "VITC REC" (item No. 7003) dial menu function to "OFF" when the VITC time code is not to be recorded. (See page 46.)
- 3. Dubbing the LTC signal recorded on the tape (Dubbing the LTC signal with the settings below prevents deterioration in the LTC time code signal.)
- [1] Set to "LTC" mode with the LTC/AUTO/VITC button. (See page 49.)
- [2] Set to "TC" mode with the CTL/TC/UB button. (See page 49.)
- [3] Set the "TC MODE" (item No. 7002) dial menu function to "REGEN." (See page 46.)
- [4] Set the "TC OUT SIGNAL REGEN" (item No. 7008) dial menu function to "REGEN." (See page 46.)

Playing back the time code/user's bit

 Set to TC or UB mode with the CTL/TC/UB button.

TC: For time code playback.
UB: For user's bit playback.

2. Set the LTC/AUTO/VITC button.

C: The LTC time code signal recorded on linear track CH2 is read out.

AUTO: Priority is given to reading out the VITC signal when in the slow mode, and to reading out the LTC signal at all other times.

VITC: Only the VITC signal is read out.

 Interpolation is provided by the CTL signal when it is no longer possible to read out the time code signal in any of the modes.

Press the PLAY button.

CTL/TC/UB

LTC/AUTO/VITC

To check the VITC insertion lines during playing back.

Set the CONTROL Switch to "REMOTE" and press the RESET button

Display

15 · 18 L

(When VITC is inserted in line 16 and 18.)

CONTROL

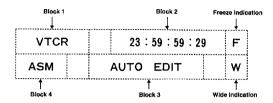

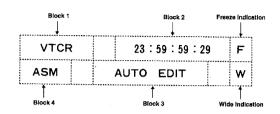

25

Superimpose screen

When the ON SCREEN switch in the front pocket is set to ON, the superimpose signal listed below are added to the signals output from the VIDEO MONITOR connector.

The superimpose display does not appear in the dial menu mode.

Block 1

The time code modes are addreviated on the display usign the following characters.

CTL: Control signal

TCG: Time code generator value

LTCR: Playback value of LTC time code

VTCR: Playback value of VITC time code

ETCG: External time code generator value

LUBG: Generator value of LTC user's bit

VUBG: Generator value of VITC user's bit

LUBR: Playback value of LTC user's bit

VUBR: Playback value of VITC user's bit

EUBG: Generator value of external user's bit

Block 2

The time code value is indicated in hours, minutes, seconds and frames, each with 2 digits. (In the UB mode, no colon is displayed.)

12:34:43:21

- [:] = Non-drop frame mode
- [.] = Drop frame mode
- [] = Time code reading disabled

Block 3

The VTR operating modes are indicated as below.

EJECT (eject) PLAY (playback) REC (recording)

EF BF

REC (recording) STOP (stop) FE (fast forward)

FF (fast forward) REW (rewind) STILL (pause) EDIT (editing)

EPLY (edit play) READY-OFF (ready mode release)

Block 3 (cont.)

. The search is also displayed.

JOG XXXXX (jog) SHTL XXXXX (shuttle)

"xxxxx" denotes the search speed.

__1/25 Tape speed (in this case, search proceeds in the reverse direction at 1/25x normal playback speed)

*:Forward direction/-:reverse direction

Block 4

The edit modes are indicated as follows.

ASM (Assemble)

V12 (Insert): VIDEO, AUDIO-CH1, AUDIO-CH2

NOTE

 The block 3, 4 displays and wide indication appears only when the "STATUS SUPER" dial menu function (item No. 4004) is set to ON.

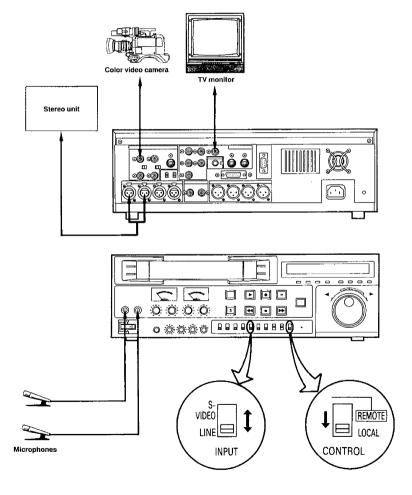

REFERENCE

- The superimpose display characters can be changed using the dial menu function (item No. 4001). (See page 43.)
- The superimpose display position can be moved using the dial menu function (item No. 4002, 4003). (See page 43.)

Connections for basic system

These connections are for editing using one S-VHS VTR.

- . Set the CONTROL switch to LOCAL.
- . Set the "SYNC" (item No. 1001) dial menu function to "NORM".
- Set the "AUDIO CH2" (item No. 3006) dial menu function to "AUDIO".
 (Set to LTC for editing with the LTC time code signal.)

Dubbing connections

These connections are for editing using two S-VHS VTRs.

The ways to prevent deterioration in the picture quality caused by the dubbing connections are ranked as follows in terms of their effectiveness.

- 1. Use of S-VIDEO cable
- 2. Use of BNC cable
- · Set the CONTROL switch to LOCAL.
- Set the "AUDIO CH2" (item No. 3006) dial menu function to "AUDIO". (Set this to "TIME CODE" when dubbing LTC time code signals.)

......

Set the "IMAGE MODE SELECT" (item No. 2001) dial menu function to "EDIT".

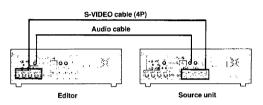

Connections using S-VIDEO cable (4P)

Main setting (source unit)

- Dial menu function "SYNC" (item No. 1001) to "NORMAL"
- Dial menu function "IMAGE" (item No. 2001) to "EDIT"

Main setting (editor)

- •INPUT switch to "S-VIDEO"
- Dial menu function "SYNC" (item No. 1001) to "NORMAL"
- Dial menu function "IMAGE MODE SELECT" (item No. 2001) to "EDIT"

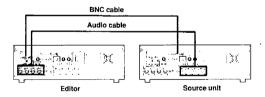

2. Connections using BNC cable.

Main setting (source unit)

- Dial menu function "SYNC" (item No. 1001) to "NORMAL"
- Dial menu function "IMAGE MODE SELECT" (item No. 2001) to "EDIT"

Main setting (editor)

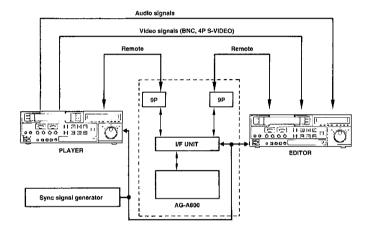

- INPUT switch to "LINE"
- Dial menu function "SYNC" (item No. 1001) to "NORMAL"
- Dial menu function "IMAGE MODE SELECT" (item No. 2001) to "EDIT"

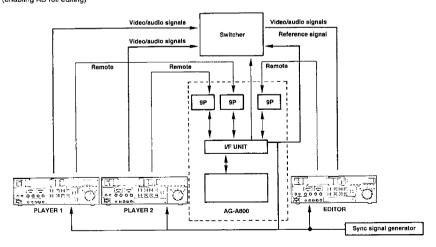

System using 9P editing controller

Editing at a high degree of accuracy and with almost no editing errors can be done by installing the AG-F700 (optional accessory) in this unit and using the 9P editing controller (optional accessory) to conduct time code editing. This unit contains its own time base corrector (TBC) and so obviates the need for time-consuming TBC wiring during

System composed of one editor and one player

System composed of one editor and two players (enabling AB roll editing)

Connect the editing controller

- · Connect it to be REMOTE (9P) connector.
- · Connect the audio signals.
- Connect the video signals.
- · Connect the REF signals.

Set 9P DEVICE TYPE SELECT (item No. 5002).

Use the dial menu function to set this.

OTHER TYPES (set-up No. 00): When using a controller not made by Panasonic When using a controller made by Panasonic

S-VHS ID (set-up No. 01):

Set the CONTROL switch to REMOTE.

Operate the unit from the editing controller.

For details on how to operate the editing controller, reference should be made to the Instruction Manual accompanying the controller.

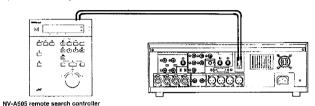

NOTES

- Set the editing timing for the 9P editing controller to 8 frames.
- · When using an editing controller provided with a color framing function, do not set the color framing mode.
- · Although, for insert editing using the 9P editing system, it is possible to set the editing channels independently for the time code singls and audio signals, this particular unit uses linear track CH2 for both the time code (LTC) and normal audio CH2. For this reason, the "AUDIO CH2" dial menu function (item No. 3006) must be set properly in accordance with the signals which are to be edited.
- For time code editing, set the "TC INT/EXT SELECT" dial menu function (item No. 7001) to "INT".
- When the 9P editing system is used, the "9P FF/REW MODE" dial menu function (item No. 5003) can be used to select full loading FF/REW and unloading FF/REW.
- Set the dial menu function (item No. 1003) "TAPE PROTECTION" to "AUTO ADVANCE" only when editing lengthy scenes during AB roll editing.
- Set the DIGITAL SLOW switch to "OFF" or "1" to perform editing using synchronization.

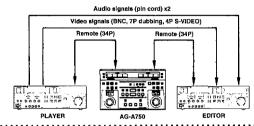

System using remote search controller

System using 34P editing controller

In the 34-pin remote connector (option) is installed and the NV-A505 remote search controller (option) is connected, the unit can be operated from a distance.

It is possible to use the editing controller to operate the unit and edit material with a high degree of accuracy by installing the 34-pin remote connector (option) and connecting the optional 34P editing controller to the unit.

Connect the NV-A505 remote search controller to the REMOTE (34-pin) connector.

Set the 34P SHTL MAX SPEED (item No. 5004).

Use the dial menu function to set the maximum shuttle search speed which can be operated by the editing controller

10 (set-up No. 00): 10x normal tape speed 20 (set-up No. 01): 20x normal tape speed

Set 34P CONTROLLER TYPE (item No. 5005).

Use the dial menu function to set the type of editing controller being used. TYPE-1 (set-up No. 00): AG-A800, AG-A770, AG-A750

TYPE-2 (set-up No. 01): AG-A650, NV-A500, NV-A505

Set the CONTROL switch to REMOTE.

This disables the operation of all the unit's control buttons except STOP and EJECT.

Operate the NV-A505 remote search controller.

The NV-A505 can be used to control the following:

- · Assemble editing, insert editing
- · Recording, playback
- · Fast forwarding, rewinding, stop and pause
- . 9-mode variable speed (0 to 10x or 20x) search playback (but not jog)

REFERENCE

- . The remote search controller can be used as an interface when configuring a system in which two or three source units are connected simultaneously.
- The AG-A600 remote controller can also be used.

Connect the editing controller

- . Connect it to the REMOTE (34P) connector.
- · Connect the audio signals.
- · Connect the video signals.

Set the 34P SHTL MAX SPEED (item No. 5004).

Use the dial menu function to set the maximum shuttle search speed which can be set by the editing controller being

10 (set-up No. 00): 10× normal tape speed 20 (set-up No. 01): 20× normal tape speed

Set 34P CONTROLLER TYPE (item No. 5005).

Use the dial menu function to set the type of editing controller to be used. TYPE-1 (set-up No. 00): AG-A800, AG-A770, AG-A750

TYPE-2 (set-up No. 01): AG-A650, NV-A500, NV-A505

Set the CONTROL switch to REMOTE.

Operate the unit from the editing controller.

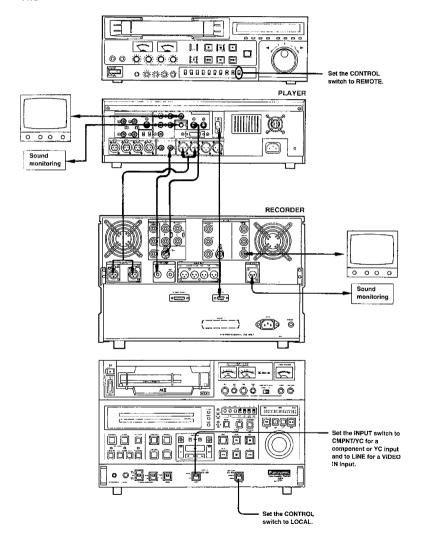

For details on how to operate the editing controller, reference should be made to the Instruction Manual

NOTES

- . Use the DIGITAL SLOW switch on the editor at the "OFF" position. The editing accuracy will be impaired if the switch is used at "ON."
- When using the AG-7750 or AG-7650 as the source unit, set the "PLAY DELAY" (item No. 6004) dial menu function on the editor to "1 FRAME."
- . When the NV-A500 editing controller is used, preview may not be terminated even when the EDIT STOP button is pressed. In cases like this, press the PAUSE button.
- . When the AG-A800 editing controller is used in a 34P system, the tape may advance with the READY ON/OFF operation but this has no effect on the editing accuracy.
- . When the AG-A800 editing controller is used in a 34P system, use it in the STOP EE mode. In the STOP PB mode, preview operations during assembly editing cannot be conducted.
- Set the editor's MEMORY switch to "EDIT" and the player's MEMORY switch to "PLAY."

System using MII unit

This unit comes with an RS-422A interface facility which enables it to be connected with a professional/industrial MII VTB.

The above system employs the model AU-65 MII VTR designed for commercial applications.

Error displays

When an error appears on the counter display, it means that a malfunction has occurred in the unit. When this happens, terminate operation without delay and remedy the trouble by following the instructions in the Instruction Manual

Error display	Problem	Remedy	
d	Condensation	Leave power on and wait until error display is cleared (see MEMO below).	
E - 0 *	Malfunction in fan motor section	Turn off the power and switch it back on again, and check that the unit operates normally.	
E - 2	Malfunction in elevator section	This occurs when the cassette has not been inserted properly. Turn off the power and switch it	
E - 3	Malfunction in loading section	back on again, and check that the unit operates normally.	
E - 4	Malfunction in cylinder section	This occurs when a heavy load is applied because	
E - 5	Malfunction in reel section	condensation has formed on the tape or for some other reason. Turn off the power and switch it back	
E - 6	Malfunction in tension section	on again, and check that the unit operates normally	
E - 7	Malfunction in solenoid section	Turn off the power and switch it back on again, and check that the unit operates normally.	

· Contact your authorized dealer if the unit does not function normally when the above remedial action has been taken,

*Fan motor error display

When trouble occurs in the fan motor area, the warning display shown on the left is output to the monitor screen alternately with the regular counter display. Since the unit's power will be automatically turned off about 20 minutes after this warning is output, complete the work speedily and turn off the power. The power can be switched back on in about 20 minutes' time.

MEMO

Condensation

This phenomenon is caused by the same principle under which droplets of moisture (condensation) form on a window in a heated room when it is cold outside. It can occur when the unit or a tape is moved to a location with a significantly different temperature or humidity. It also occurs:

- When the unit or tape is moved to a location full of steam which cannot escape or a location with a high humidity, or immediately after movement to a heated room
- When the unit or tape is moved quickly from a cold or cooled location to a high-temperature and/or high-humidity location

SHOULD A MALFUNCTION OCCUR, TURN OFF THE POWER IMMEDIATELY, TAKE HOLD OF THE POWER PLUG AND DISCONNECT IT FROM THE POWER SOCKET AND CONTACT YOUR DEALER. CONTINUED USE MAY CAUSE FURTHER DETERIORATION OR LEAD TO AN ACCIDENT.

Servo reference

This unit automatically selects the input video signal selected by the INPUT switch, the REF VIDEO signal supplied from the REF IN connector or the internal sync signal (INT) as the servo reference signal.] The relationship between the "SYNC" dial menu function (item No. 1001) and servo reference signal during normal playback and recording is as described below.

During playback or search

SYNC	Input signal mode		
SELECT switch position	VIDEO IN signal	REF IN signal	Reference signal
NORM	0	0	REF IN signal
	0	×	INT sync signal
	×	0	REF IN signal
	×	×	INT sync signal
EXT	0	0	REF IN signal
	0	×	INT sync signal

2-2-7. Removal of the XLR F C.B.A. and XLR M C.B.A.

- Unscrew the 8 screws (G-1) and remove the XLR F C.B.A. (Figure D10 and D11)
- 2. Unscrew the 8 screws (G-2) and remove the XLR M C.B.A. (Figure D10 and D11)

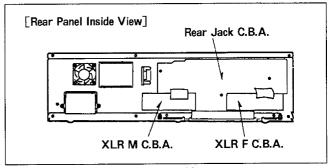

Figure D10

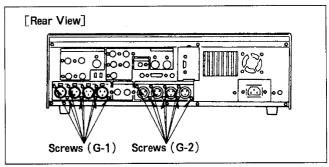

Figure D11

2-2-8. Removal of the Rear Jack C.B.A.

- 1. Unscrew the 14 screws (H-1) and 4 screws (H-2). (Figure D10 And D12)
- 2. Lift the Rear Jack C.B.A.

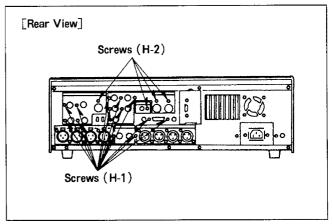

Figure D12

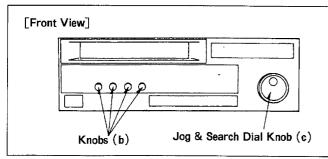

Figure D13

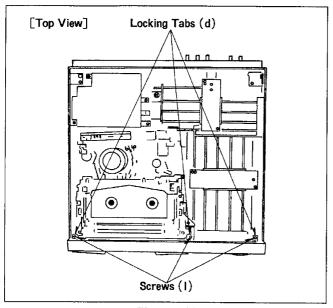

Figure D14

2-2-9. Removal of the Front Panel

- Pull out the 4 Knobs (b) on the Front Panel. (FigureD13)
- 2. Pull out the Jog & Search Dial Knob (c) on the Front Panel. (Figure D13)
- Unscrew the 3 screws (I) on the top of the Front Panel and a screw (J) on the bottom of the Front Panel. (Figure D14 and Figure D15)
- 4. Unlock the 3 locking tabs (d) on the top of the Front Panel and the 2 locking tabs (e) on the bottom of the Front Panel and then remove it. (Figure D14 and D15)

2-2-10. Removal of the Front, Front LED and Keyboard C.B.A.

- 1. Unscrew the 4 screws (K) on the Jog & Search Dial Unit and pull out a connector (P62005). (Figure D16)
- 2. Lift the Jog & Search Dial Unit.
- 3. Unscrew the 2 screws (L-1) and pull out the flexible cable (P62501). (Figure D17)
- 4. Lift the Front LED C.B.A.
- 5. Unscrew the 4 screws (L-2) and pull out the flexible cable (P62701). (Figure D17)

- 6. Lift the Keyboard C.B.A.
- 7. Unscrew a screw (M) and unlock the 3 locking tabs (f) on the Front C.B.A. (Figure D18)
- Carefully pull the Front C.B.A. off the unit (with taking care for the connection to the Mother C.B.A.) and then disconnect the 2 connectors (P62007 and P62008). (Figure D18)

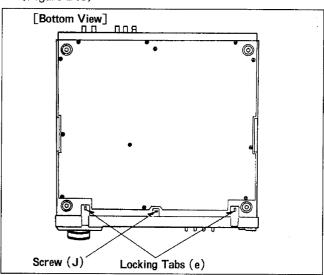

Figure D15

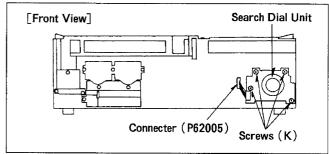

Figure D16

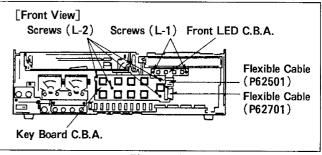

Figure D17

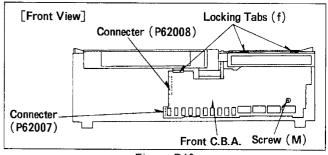

Figure D18

2-2-11.Removal of the Audio Meter Unit

- Unscrew the 6 screws (N) on the Audio Meter Unit. (Figure D19)
- 2. Lift the Audio Meter Unit.

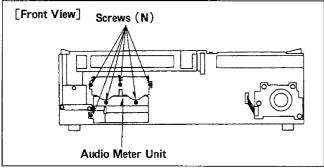

Figure D19

2-2-12. Removal of the MIC Jack C.B.A.

- Unscrew the 3 screws (O) on the MIC Jack C.B.A. (Figure D20)
- 2. Lift the MIC Jack C.B.A.

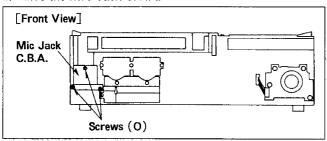

Figure D20

2-2-13. Removal of the Head Amp C.B.A.

- Unscrew the 2 screws (P) on the Head Amp C.B.A. (Figure D21)
- 2. Carefully Pull out the Head Amp C, B, A.

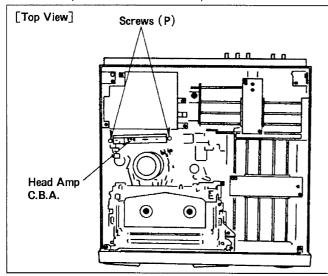

Figure D21

2-2-14. Removal of the Power Unit

- Unscrew the 2 screws (Q) on the Heat Sink (g). (Figure D22)
- Unscrew the 4 screws (R) on the Power Unit. (Figure D23)
- 3. Lift the Power Unit and then carefully pull out the 3 connectors (P1001, P1002 and P1003). (Figure D23)

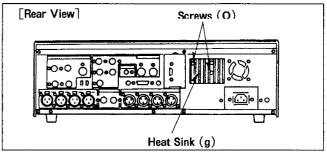

Figure D22

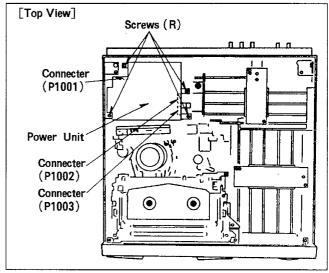

Figure D23

2-2-15. Removal of the Power Connection C.B.A.

- Unscrew the 2 screws (S) on the Rear Panel. (Figure D24)
- 2. Unscrew the 4 screws (T-1) on the Power Connection C.B.A. and a screw (T-2) on the cabinet. (Figure D25)
- 3. Carefully lift the Power Connection C.B.A. and then disconnect a connector (P1101). (Figure D25)

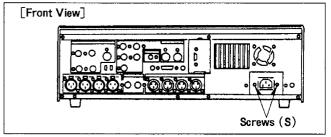

Figure D24

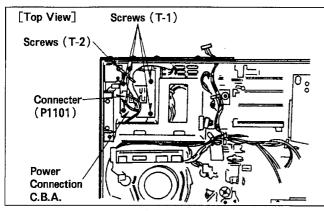

Figure D25

2-2-16.Removal of the Video Digital, Video I / O, Audio (1) and Audio (2) C.B.A.

- 1. Unscrew the 2 screws (U) and remove the C.B. Hold Piece A. (Figure D26)
- Carefully pull out the Video Digital, Video I/O, Audio
 and Audio (2) C.B.A. from Mother C.B.A. (Figure D26)

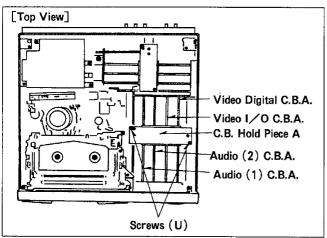

Figure D26

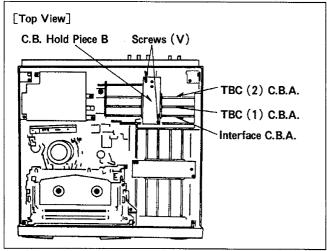

Figure D27

2-2-17. Removal of the Interface, TBC (1) and TBC (2) C.B.A.

- Unscrew the 2 screws (V) and remove the C.B. Hold Piece B. (Figure D27)
- 2. Carefully pull out the Interface C.B.A., TBC (1) C.B.A. and TBC (2) C.B.A. from Mother C.B.A. (Figure D27)

2-2-18. Removal of the Servo & System Control C.B.A.

- 1. Unscrew the 5 screws (W) on the Servo & System Control C.B.A. (Figure D28)
- 2. Unlock a locking tab (h) on the Servo & System Control C.B.A. (Figure D28)
- 3. Open the Servo & System Control C.B.A.
- 4. Disconnect the 2 flexible cables, the 3 flat cables and the all connectors from the Servo & System Control C.B.A.
- Carefully lift the Servo & System Control C.B.A. off the unit in the direction indicated by arrow (with taking care for the connection to the Mother C.B.A.). (Figure D29)

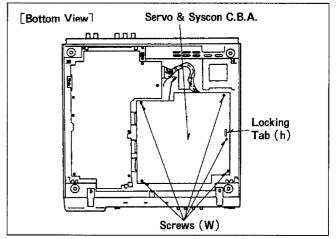

Figure D28

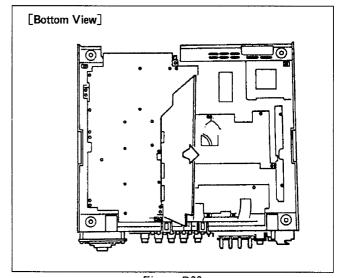

Figure D29

2-2-19. Removal of the Mother C.B.A.

- *NOTE: Before removing the Mother C.B.A., be sure to remove the Rear Panel, Front C.B.A., Video Digital C.B.A., Video I/O C.B.A., Audio (1) C.B.A., Audio (2) C.B.A., Interface C.B.A., TBC (1) C.B.A., TBC (2) C.B.A. and Servo & System Control C.B.A.
- Unscrew the 8 screws (X) on the Mother C.B.A. (Figure D30)
- 2. Lift the Mother C.B.A. and then disconnect the 2 connectors (P910 and P951). (Figure D30)

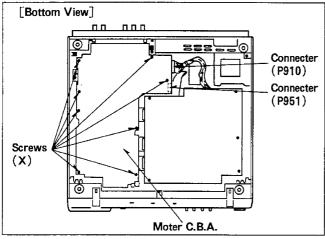

Figure D30

2-2-20. Removal of the Reel Drive C.B.A.

- Unlock the 2 locking tabs (i) on the Reel Drive C.B.A. (Figure D31)
- 2. Disconnect the 3 Flexible Cables (P2701, P2704 and P2705) and a connector (P2702). (Figure D31)
- 3. Carefully pull the Reel Drive C.B.A. in the direction indicated by arrow. (Figure D31)

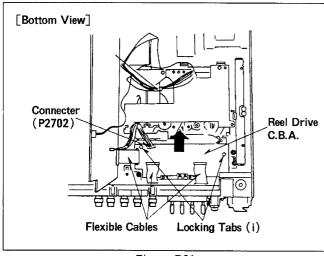

Figure D31

2-2-21. Removal of the Cassette Compartment

- 1. Unscrew the 2 screws (Y-1) and a screw (Y-2). (Figure D32)
- Disconnect 2 wires and 4 wiresfrom the connector (P1508) on the right side of the Cassette Compartment. (Figure D32)
- 3. Remove the Top plate.
- 4. Remove a Cassette Holder Unit. (Figure D33)
- 5. Unscrew the 4 screws (Z) and remove the Cassette Compartment Unit. (Figure D34)
- *NOTE: When installing the Cassette Compartment Unit, refer to Mechanical Adjustment Procedures.

IMPORTANT SAFETY NOTICE

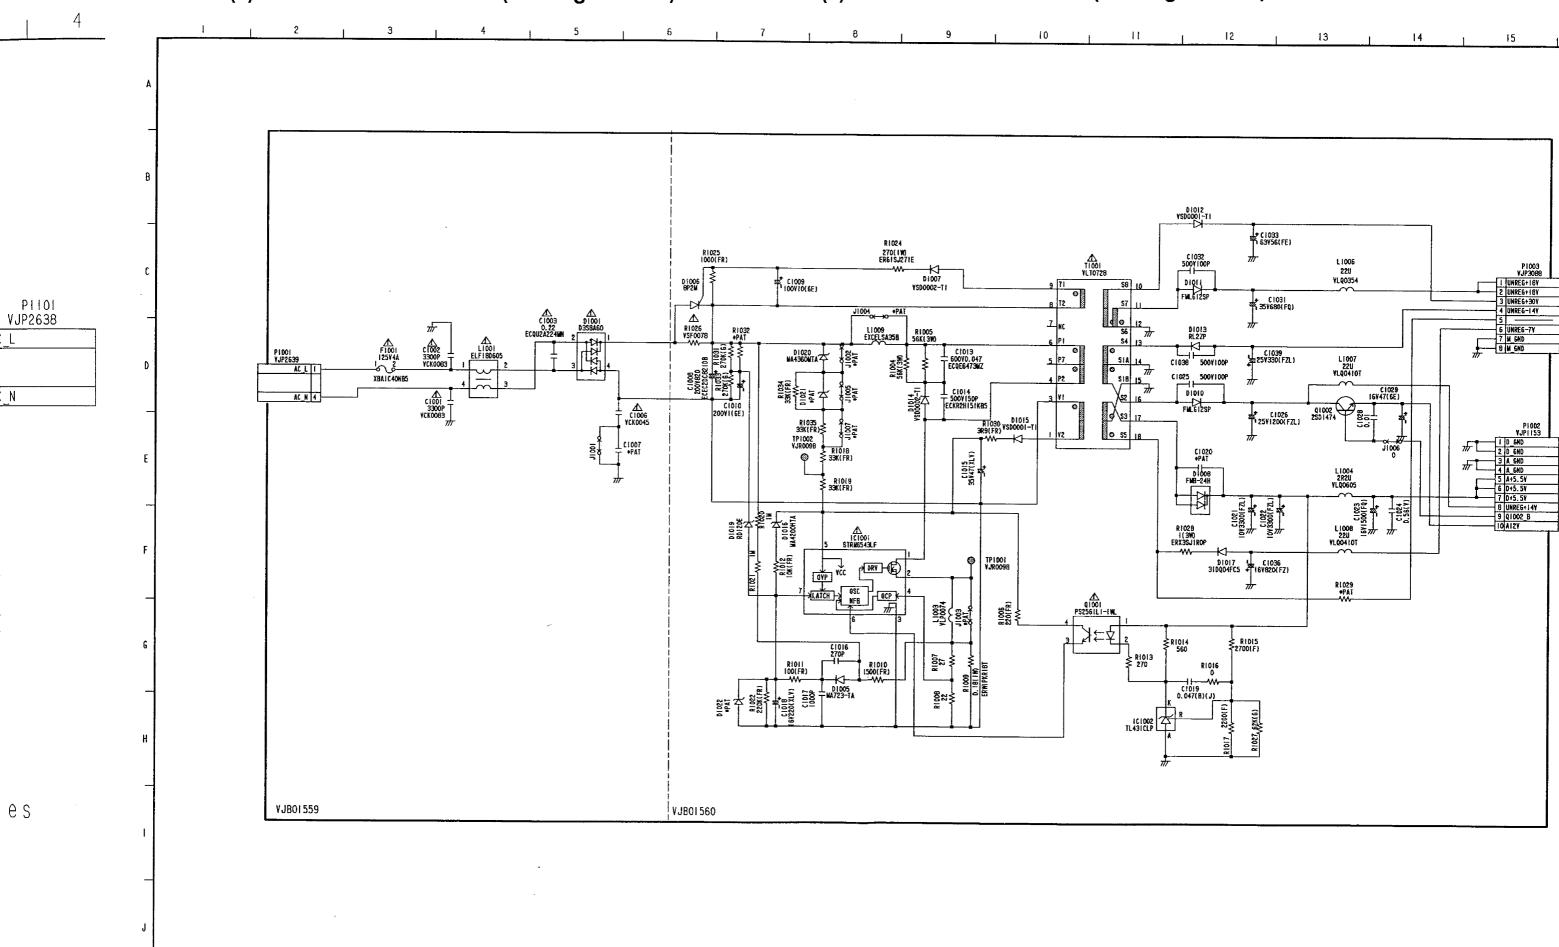

COMPONENTS IDENTIFIED WITH THE MARK \triangle HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY.
WHEN REPLACING ANY OF THESE COMPONENTS, USE ONLY THE SAME TYPE.

NOTE

DO NOT USE THE PART NUMBER SHOWN ON THIS DRAWING FOR ORDERING. THE CORRECT PART NUMBER IS SHOWN IN THE PARTS LIST. AND MAY BE SLIGHTLY DIFFERENT OR AMENDED SINCE THIS DRAWING WAS PREPARED.

IMPORTANT SAFETY NOTICE

COMPONENTS IDENTIFIED WITH THE MARK \triangle HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY.
WHEN REPLACING ANY OF THESE COMPONENTS, USE ONLY THE SAME TYPE.

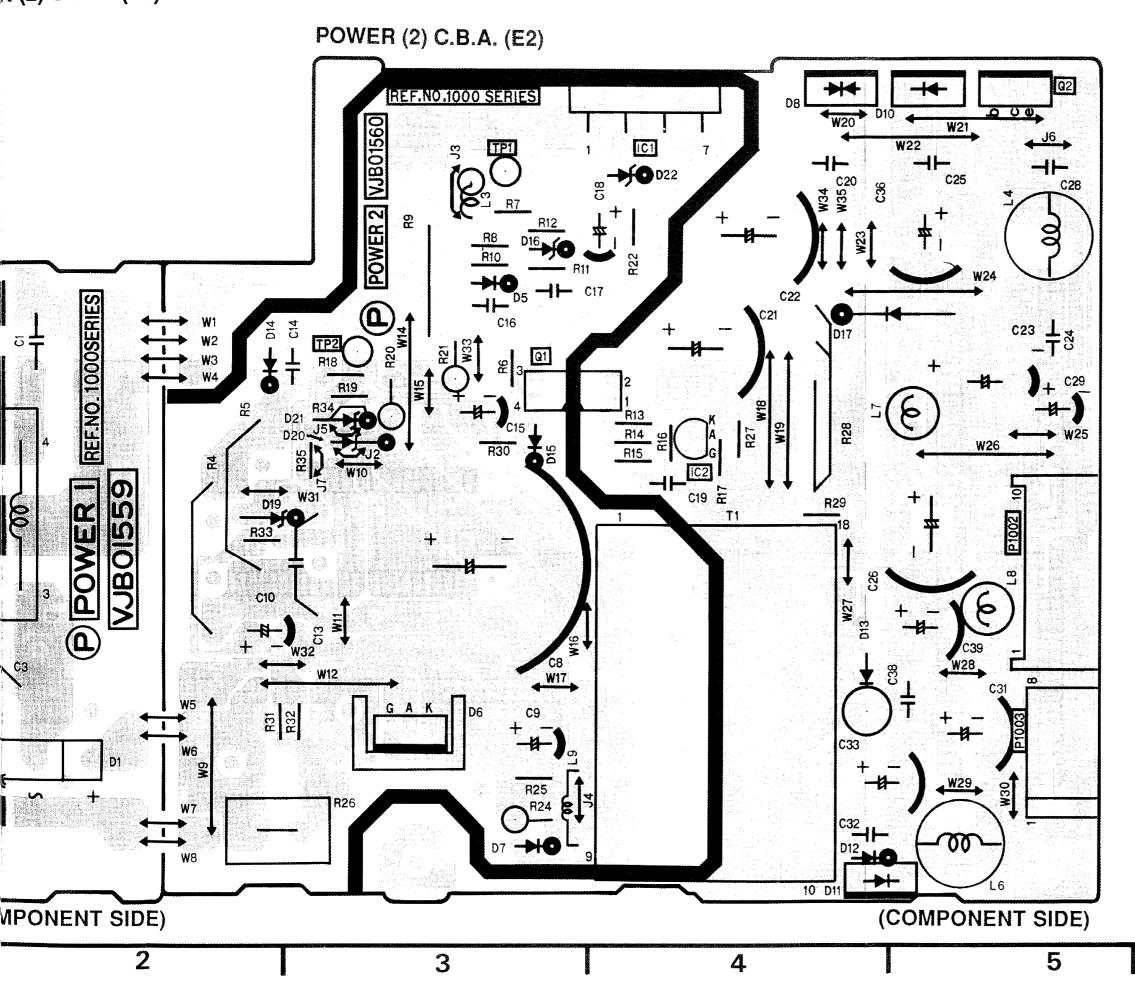

NOTE

DO NOT USE THE PART NUMBER SHOWN ON THIS DRAWING FOR ORDERING. THE CORRECT PART NUMBER IS SHOWN IN THE PARTS LIST. AND MAY BE SLIGHTLY DIFFERENT OR AMENDED SINCE THIS DRAWING WAS PREPARED.

NOTES

- 1.

 Be sure to make your orders of replacement parts according to this list.
 - "<R>" in Remark column indicates recommended parts.
 - "<M>" in Remark column indicates needed in the periodical maintenance.
- 2. IMPORTANT SAFETY NOTICE

Components indentified by "<!>" have special characteristics important for safety.

When replacing any of these components, use only the original ones.

Meaning of symbol "<!>" on this parts list is exactly the same as symbol ⚠ on Schematic and Circuit Board Diagrams.

- 3. Unless otherwise specified;
 - All resistors are in (Ω), K=1,000 Ω , M=1,000k Ω .

All capacitors are in (F), $U=10^{-6}$ F, $P=10^{-12}$ F.

4. ITEM NUMBERS WITH CAPITAL LETER E

Item numbers woth capital leter E (Example: E1, E2,) in Ref. no. column mean that the parts are listed with the E item numbers in the exploded views.

- 5. When ordering parts, use parts No. only form Part No. column.
- 6. Printed circuit board assembly with mark (RTL) is no longer available after discontinuation of the product.
- 7. Explanation of part number

《 CAPACITOR 》

Type

Rated Volt.

Capacitance Value

Type

Туре	Delectric
ECA ECE ECS ECO	ELECTROLYTIC CAPACITOR
ECC ECF ECK ECU	CERAMIC CAPACITOR
ECH ECQ ECW	PLASTIC FILM CAPACITOR

Rated Volt.

Code	0G	0 J	1 A	1C	1D	1E	1 V	1H	1 J	1K
W.V. (V)	4	6. 3	10	16	20	25	3 5	50	63	80

Code	2A	2C	2P	2D	2E	2F	2V	2G	2W	2H
W.V. (V)	100	160	180	200	250	315	350	400	450	500

Capacitance Value

The 1st 2 figures are actual values and the 3rd denotes the number of zero. "R" denotes the decimal point and all figures are the actual number with "R".

※ Unit Electrolytic capacitor

-- μF

Ceramic capacitor

· pF

Plastic film capacitor

рF

Example : ECEA1HU221

ELECTCTROYTIC CAPACITOR 50V 220 μ F

《 RESISTOR 》

Туре

Rated Power

Resistance Value

Туре

Type	Delectric
ERD	CARBON RESISTOR
ERF FRW	WIRE WOUND RESISTOR
ERQ ERU	FISE RESISTOR
ERC	SOLID RESISTOR
ERX ERG ERO ERN	METAL RESISTOR
ERJ	CHIP RESISTOR
ERS	THERMAL SENSTIVE RESISTOR

Rated Power

Code	1	2	3	3G	6	8	10	12	14	25
R.Power (w)	1	2	3	1/16	1/10	1/8	1/8	1/2	1/4	1/4

Code	S1	S2				
R.Power (w)		1/4				

Resistance Value

The 1st 2 figures are actual values and the 3rd denotes the number of zero. "R" denotes the decimal point and all figures are the actual number with "R".

Example : ERDS2TJ471 \rightarrow CARBON RESISTOR

1/4W 470Ω

INTRODUCTION

This Service Manual contains all the technical information which will allow service personnel to understand and service the Panasonic S-VHS editing video cassette recorder model AG-DS 850P.

This model is video cassette recorder for editing applications which was developed for applications in industry, educational establishments, studios and CATV transmissions. By the use of S-VHS system, a sharp picture quality with high resolution is obtained, and advanced editing by easy operation is realized by the introduction of highly dependable mechanisms.

SECTION 9 SUPPLEMENT	9_1

SAFETY PRECAUTIONS

GENERAL GUIDELINES

- When servicing observe the original lead dress. If a short circuit is found, replac all parts which have been overheated or damaged by the short circuit.
- After servicing, see to it that all the protectiv devices such as insulation barriers, insulation papers shields are properly installed.
- After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazards.

LEAKAGE CURRENT COLD CHECK

- Unplug the AC cord and connect a jumper between the two prongs onthe plug.
- 2. Measur the resistance value, with an ohm meter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwhead connectors, contri shafts, etc. When the exposed metallic part has a return path to the chassis, the reading shoulb be between $1\,M\,\Omega$ and $5.2\,M\,\Omega$.

When the exposed metal dose not have a return path to the chassis, the reading must be ∞ .

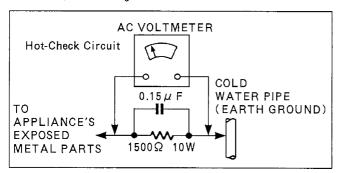

Figure 1

LEAKAGE CURRENT HOT CHECK (See Figure 1)

- Plug the AC cord directly into the AC outlet.
 Do not use an isolation transformer for this check.
- 2. Connect a 1.5 K Ω , 10W resistor, inparallel with 0.15 μ F capacitor, between each exposed metallic part on the set an a good earth ground such as a water pipe, as shown in Figure 1.
- 3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measur the potential across the resistor.
- Check each exposed metallic part, and measure the voltage at each point.
- Reverse the AC plug in the AC outlet repeat each of the above measurements.
- 6. The potantial at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possiblity of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

ELECTROSTATICALLY SENSITIVE(ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

- Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground.
 - Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
- 2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
- Use only a grounded tip soldering iron to solder or unsolder ES devices.
- Use only an anti-static solder removal device classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
- 5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
- 6. Do not remove a replacement ES device from its protective package untilimmediately before you are ready to install it. (most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
- Immediately before removing the protective material from the leads of replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
 - CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other asfety precautions.
- 8. Minimize bodily motions when handling unpackaged replacement ES devoces. (Otherwise harmless mother such as the brushing together of your clothes fabric or the lifting of your foor from a carpeted floor can generate static electricity sufficient to damage an ES device).

6-1. PARTS LOCATION

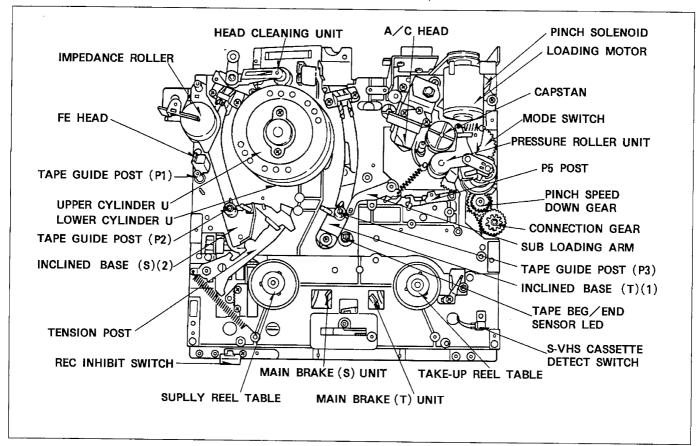

Figure M1

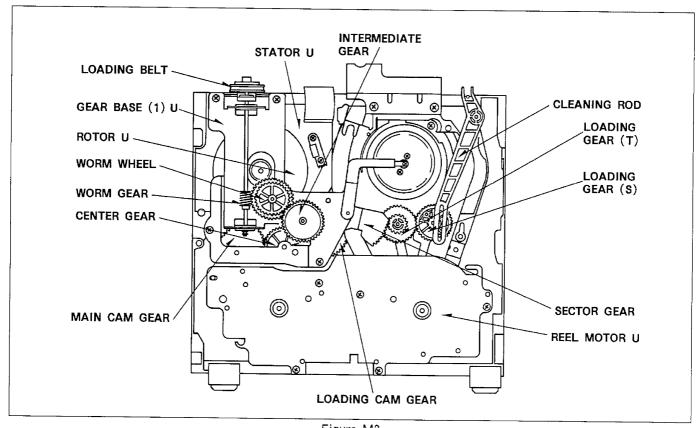

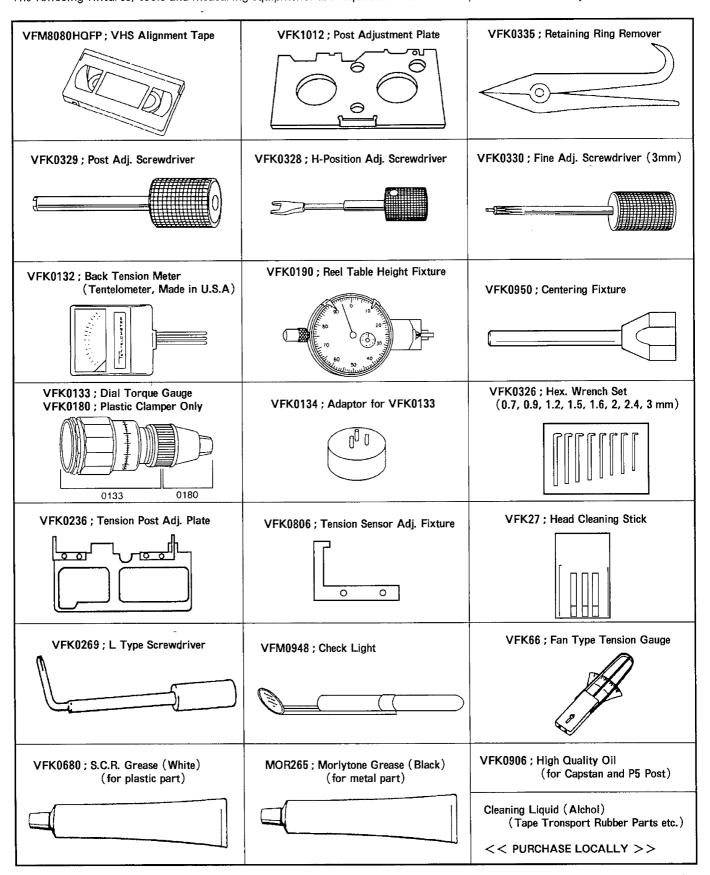

Figure M2

6-2. SERVICING FIXTURES AND TOOLS

The specified servicing fixture must be used to conduct adjustment.

The folloeing fixtures, tools and measuring equipments are required to conduct complete Mechanical Adjustments.

6-3. HOW TO EJECT MANUALLY

If the electrical circuit is defective and the action of unloading and front unloading don't work properly, it is possible to eject manually as follows.

- 1. Take out the Main AC.
- 2. Release the direction as shown in Figure M3.
- 3. Release the Wormshaft to clockwise unit cassette is ejected.

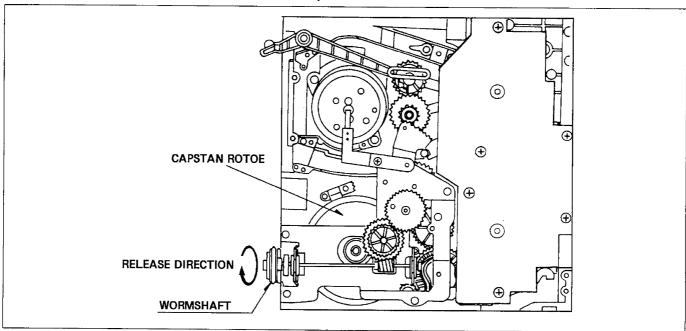

Figure M3 How to Eject Manually

6-4. MAINTENANCE PROCEDURES

6-4-1. REGULAR MAINTENANCE

The purpose of periodic maintenance is to preserve the functioning of this machine throughout its useful life. The user or service dealer should perform these maintenance regularly to ensure that maximum utility is obtained from the machine.

The VCR is a complicated place of equipment. It contains many belts, rollers, heads etc., which become worn, and deteriorate as time goes by, causing trouble. Dust and dirt will also impede the proper functioning of the machine. In light of this, it is very important that overall maintenance be done according to the maintenance chart to maintain the functions of the VCR, and to avoid accidental problems. This maintenance should also be performed after any repairs are done on the equipment.

The VCR used for business applications requires particular attention for several reasons. The installation conditions and applications are not always the best. Long use times, or poor environmental conditions may adversely affect the lifespan and performance of the machine. Regular maintenance assures that the purchaser obtains the maximum value for his expenditure. Accordingly, the necessity of regular maintenance should be fully explained at the time of sale, as well as during after-sale repairs.

6-4-2. MAINTENANCE CHART

The following periodic maintenance is required to prolong the life of the machine.

Ref. No. IN P/L	Parts Name		Hour											Hour

*NOTE:

Symbol	Maintenance	Requirement	Remark					
•	Cleaning -	Ethyl-alcohol or Cleaning Liquid ⁱ (Purchase locally)	Wipe dirt from the parts using soft cloth impregnated with Ethyl-Alcohol. Note: When cleaning rubber parts, avoid using excessive alcohol since it may accelerate deterioration of these parts. After cleaning with alcohol, wipe the alcohol quickly and thoroughly.					
0	Replacement							
Δ	Lubrication	High Quality Spindle Oil (Purchase locally)	Supply one or two drops of oil.					
A	Greasing	Molytone Grease (MOR265)	Wipe the old grease and apply new grease.					
×	Greasing	S.C.R. Grease (VFK0680)	Wipe the old grease and apply new grease.					

6-4-3. LUBRICATION PROCEDURES OF THE CAPSTAN SHAFT

- 1. Remove the Pressure rollerUnit.
- 2. Remove the Thrust Screw.
- 3. Apply two drops of the oil (VFK0906) on the top of Capsutan Shaft as shown in Fig M6-A.

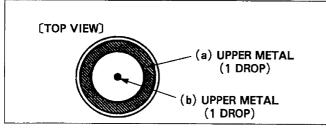

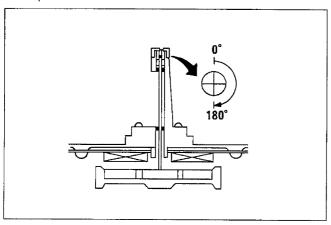

Figure M6-A

- 4. Turn the Thrust Adjustment Screw slowly to clockwise until the Capstan Rotor just starts turning (separate from the Capustan Stator).
- 5. Turn the Thrust Adjustment Sscrew another 180° clockwise as shown in Figure M6-B.
- 6. Install the Pressure Roller Unit.
- 7. Wipe the extra oil.

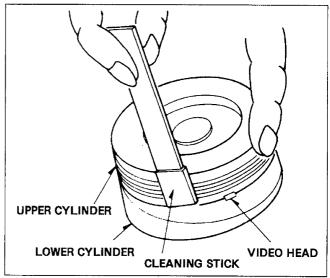

FiguerM6-B

6-4-4. PROCEDURES FOR CLEANING OF THE CYLINDER UNIT

- Position the Video Head to permit access for cleaning and hold the upper cylinder to keep it from turning while cleaning.
- 2. Gently rub the Video Head in direction of tape travel with Head Cleaning Stick moistened with Cleaning.
- 3. Repeat for the other video heads (FigureM7).

Note: 1.Do not rub vertically.

2.Do not apply any pressure to heads.

FigureM7

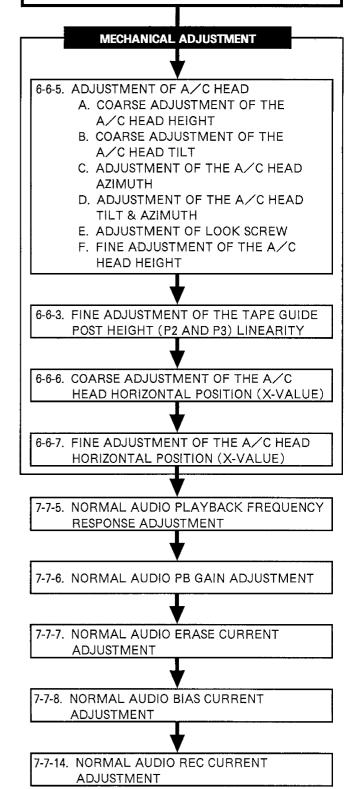

6-4-5. ADJUSTMENTS AFTER **RE-INSTALLING THE UPPER** CYLINDER, LOWER CYLINDER

AFTER RE-INSTALLING THE UPPER CYLINDER OR LOWER CYLINDER

6-4-6. ADJUSTMENTS AFTER RE-INSTALLING THE A/C **HEAD UNIT**

AFTER RE-INSTALLING THE A/C HEAD UNIT

6-5. MECHANICAL PARTS REPLACEMENT PROCEDURES

6-5-1. REPLACEMENT OF THE UPPER CYLINDER UNIT

First remove two screws as shown in Figure M10-A.
 Then unsolder of the soldered portions indicatedby arrows on the Upper Cylinder, and finally remove the Upper Cylinder.

Note: Soldered portion can be easily removed by using solder sucking wire, etc.

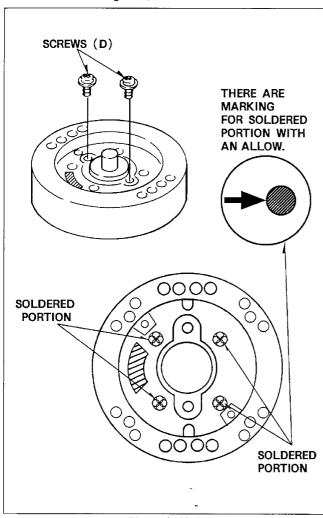

Figure M10-A

2. The Upper Cylinder unit can be reinstalled by reversing the removal procedure.

However, when Upper Cylinder is installed, be extremely carefully so that white portion of P.C.Board of Upper Cylinder correctly matches the white portion of bottom cylinder as shown in Figure M10-A.

Note: If the Upper Cylinder Unit is reversal installed, no color will appear when playing back pre-recorded tapes.

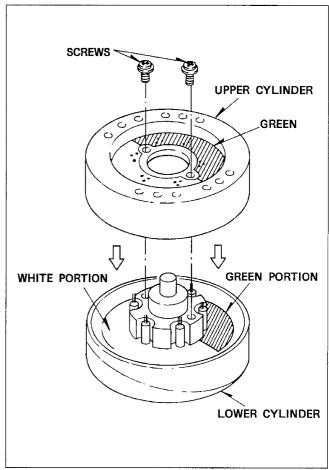

Figure M10-B

6-5-2. REPLACEMENT OF THE LOWER CYLINDER UNIT

- 1. Unscrew the 2 screws and remove the Head Amp.
- 2. Remove the Cleaning rod from bottom side.
- 3. Unscrew 3 screws (A). Since there is very little clearance between DD Cylinder (Lower Cylinder) Unit and Chassis, remove the Cylinder gently and carefully (Figure M11).

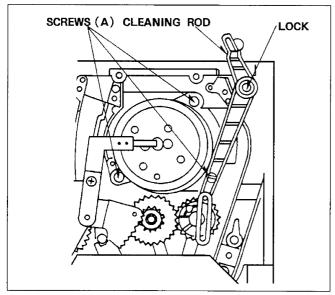

Figure M11

- 4. Reinstall the new DD Cylinder (Lower Cylinder) Unit in the chassis, tighten the 3 screws (A). Then connect a connectors and reinstall the Cleaning Rod.
- 5. Re-install the Head Amp C.B.A.

Note: After reinstall the Upper Cylinder Unit should be perform Mechanical and Electrical adjustment (Refer to 3-4-5. Maintenance Procedures).

6-5-3. REPLACEMENT OF THE A/C HEAD (1) UNIT

1. Disconnect a connector (H)(Figure M12).

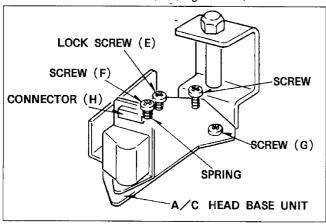

Figure M12

- 2. Unscrew 3 (B)(C)(D) screws with spring and then remove the A/C Head Unit (Figure M12).
- 3. The A/C Head (1) Unit can be reinstalled by reversing the removal procedure.

Note: After reinstall the Upper Cylinder Unit should be perform Mechanical and Electrical adjustment (Refer to 6-4-6. Maintenance Procedures).

6-5-4. REPLACEMENT OF THE **FULL ERASE HEAD**

1. Disconnect a connector (J) and unscrew a screw (E) and remove the Full Erase Head (Figure M13).

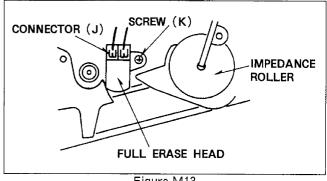

Figure M13

3. The new Full Erase Head can be reinstalled by reversing the removal procedure.

6-5-5. REPLACEMENT OF THE **CAPSTAN ROTOR & STATOR**

When replacing the Capstan stator unit the Center Fixing Tool must be used to fix the center of Capstan Stator Unit.

- 1. Remove the loading belt.
- 2. Unscrew the 4 (F) screws and remove Gear base Unit.
- 3. Carefully lift up the capstan rotor from the capstan housing, taking care so as not loose the 2 oil seals as shown in Figure M14-A.

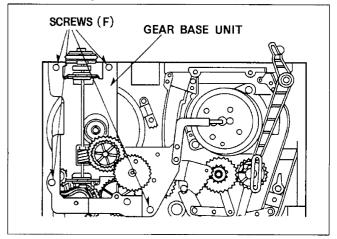

Figure M14-A

- 4. Remove the 2 oil seals.
- 5. Unscrew the 3 (G) screws and remove Capstan Stator.
- 6. Place the capstan stator unit into position.
- 7. Loosely tighten the 3 (G) screws.
- 8. Insert the Center Fixing Tool as shown in Figure M14-B.

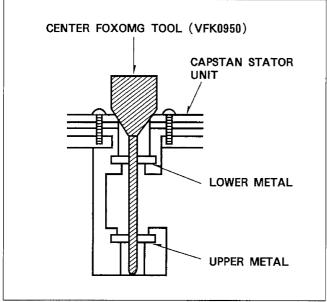

Figure M14-B

- 9. Tighten the 3 screws (G).
- 10. Remove the center fixing tool.
- 11. The new capstan rotor unit can be reinstalled by reversing the removal procedure.

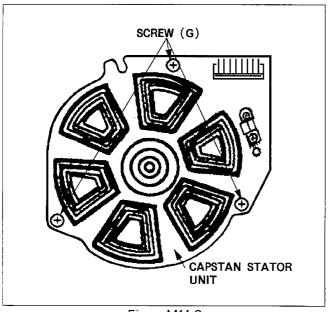

Figure M14-C

6-5-6. REPLACEMENT OF THE CAPSTAN HOUSING UNIT

- 1. Remove the pressure Roller Unit.
- 2. Remove the Sub post spring from the hook of Capstan Housing.
- 3. Unscrew the 3 screws (H) and remove Capstan Housing.
- 4. Remove the 2 oil seals and thrust screw.
- 5. Replace the new Capstan Housing, 2 oil seals and thrust screw at same time.
- 6. Re-install the Capstan Housing Unit by reversing the remove procedure.

Note: After re-installing the thrust screw adjustment of the thrust screw are required. Replace the new Capstan Rotor, 2 oil seals and thrust screw at same time. After re-installing the capstan rotor or capstan stator confirmation of FG out put level and adjustment of FG head gap are required.

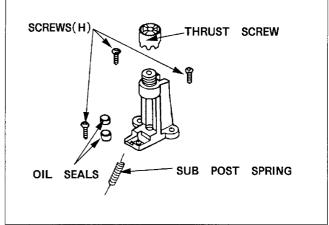

Figure M15

6-5-7. REPLACEMENT OF THE INCLINED BASE (S),(T)

《SUPPLY SIDE》

- 1. Unscrew a screw (I) and remove the head cleaning plate unit as shown in Figure M16-A.
- 2. Unscrew the 2 screws (J) and remove the post stopper.

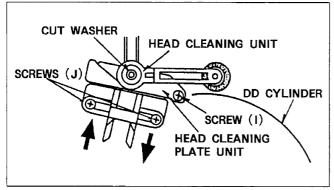

Figure M16-A

3. Remove the P2 post unit from loading arm (S) as shown in Figure M16-B.

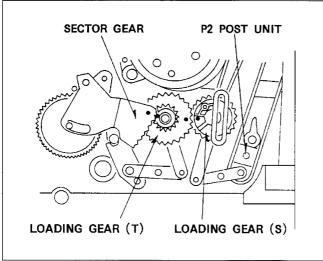

Figure M16-B

- 4. Pull out the Inclined base (S) from loading base.
- The new inclined base unit can be reinstalled by reversing the removal procedure.

Note: Install post stopper pushing the arrow direction (A), (B) as shown in Figure M16-A. After re-installing the inclined base (S) confirmation of tape interchangeability and P2, P3 posts adjustments are required.

《TAKE-UP SIDE》

- 1. Unscrew a screw (K) and remove the inclined base (T) as show in Figure M16-C.
- Install the inclined base (T) so that the tip of inclined base is center on the Plate Hole and then tighten screw (K).

Note: After re-installing the inclined base (T) confirmation of tape interchangeability and inclined base adjustment are required.

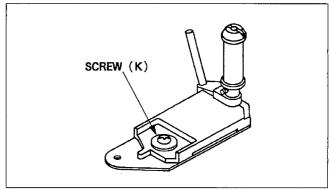

Figure M16-C

6-5-8. REPLACEMENT OF THE P5 POST

- 1. Remove the top cover and cassette holder.
- Rotate the loading motor to clockwise, until the stop mode.
- 3. Remove the pressure roller unit.
- Remove the pinch cam (Ref. to Replacement of the mode switch) and P5 pull out sector gear as shown in Figure M17.

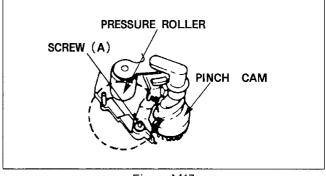

Figure M17

- 5. Unscrew a Nut (A) and Remove the P5 Post.
- 6. The new P5 post can be reinstalled by reversing the removal procedure.

Note: After-reinstalling the P5 post confirmation of tape waving and P5 post height adjustment are required.

6-5-9. REPLACEMENT OF THE REELUNIT

- Remove 6 screws (L) and carefully lift the DD Reel Unit
- 2. Disconnect a connector.

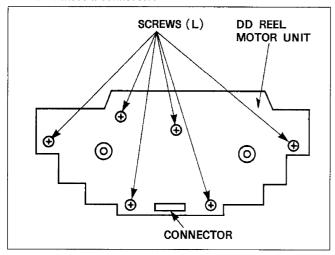

Figure M18-A

3. The Reel Motor Unit can be re-installed by reversing the removal procedure.

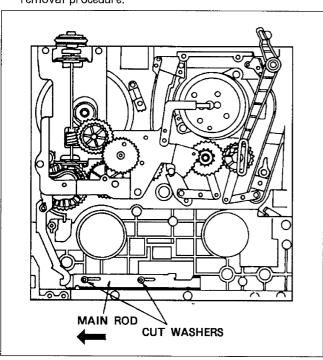

Figure M18-B

Note: When assembling the DD Reel Motor Unit, side the Main Rod to far left side by rotating a center Gear.

6-5-10. REPLACEMENT OF THE MAIN BRAKE (S),(T) UNIT

- Remove the Reel Unit (Refer to Replacement of the Reel Unit).
- 2. Remove a Retaining Ring (A).
- 3. Remove the Main Brake (S),(T) with a spring.

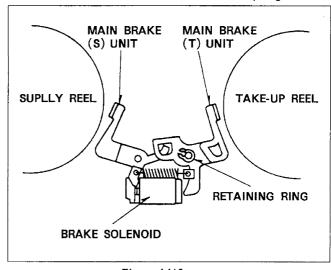

Figure M19

4. The new Main Brake (S),(T) Unit can be reinstalled by reversing the removal procedure.

Note: When assembling the DD Reel Motor Unit, slide the Main Rod to far left side by rotating a Center Gear (Figure M19).

6-5-11. REPLACEMENT OF THE PRESSURE ROLLER UNIT

- 1. Place the deck in or EJECT mode.
- 2. Remove the Pinch Can Cap.
- 3. Remove the Pressure Roller Unit.

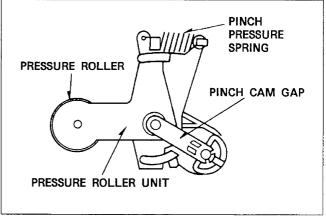

Figure M20

4. The new Pressure Roller Unit can be re-installed by reversing the removal procedure.

6-5-12. REPLACEMENT OF THE MODE SWITCH

- 1. Place the deck in the STOP mode.
- 2. Remove the Cassette Compartment Unit. (Refer to Disassembly Procedures).
- 3. Remove the Pinch Cam Cap and Pressure Roller Unit.
- 4. Unscrew the 2 screws and remove the Head Amp.
- 5. Remove the Pinch Cam.
- Unscrew 2 screws (M) and remove the Loading Motor Base.
- 7. Unscrew a screw (N) and unsolder 5 of soldered portions.
- 8. Finally remove the Mode Switch.

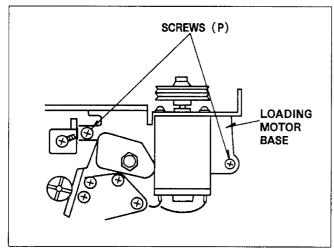

Figure M21-A

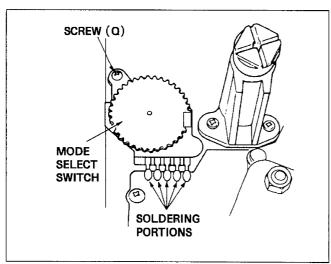

Figure M21-B

- Install a Mode Switch and tighten screw (N), then solder
 soldering portions.
- Install the Pinch Cam and Pressure Roller Unit. (Refer to "Assembly Procedures of Pinch Cam & Pressure Roller Unit.")
- 11. Install the Loading Motor Base and tighten screw (M).
- 12. Install the Head Amp and tighten 2 screws.
- 13. Install the Cassette Compartment. (Refer to Reinstallation of Cassette Compartment.)

6-5-13. REPLACEMENT OF THE PINCH SOLENOID

- 1. Unscrew 2 screws (M) and remove the Loading Motor Base (Figure M21-A).
- 2. Unscrew 2 screws (O), Remove the Motor Pulley and Loading Motor (Figure M22-A).
- 3. Disconnect a connector (red) on the Motor Base C.B.A.
- Unscrew 2 screws (P)(Figure M22-B) and remove the Pinch Solenoid.
- Install the Pinch Solenoid on to the Motor Base so that the hole of the Motor Base should be the large hole of the Solenoid Base (Figure M22-C).
- 6. Tighten 2 screws (P).
- 7. Install a Loading Motor and tighten 2 screws (O).
- 8. Install the Loading Motor Base and tighten 2 screws (M)(Figure M21-A).

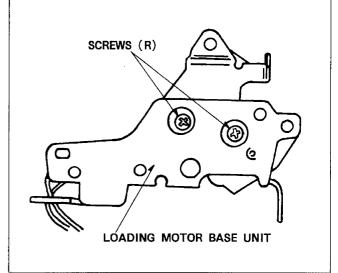

Figure M22-A

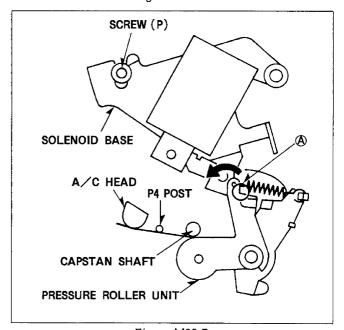

Figure M22-B

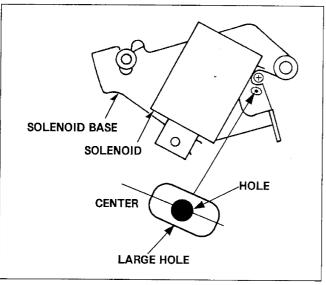

Figure M22-C

Note: Pressure Adjustment of the Pinch Roller (Refer to Mechanical Adjustment procedures) should be performed after completion of reinstalling the Pinch Solenoid.

6-5-14. REPLACEMENT OF THE HEAD CLEANING PAD

- Remove a Cut Washer (N) and the Head Cleaning Pad Unit.
- 2. The Head Cleaning Pad Unit can be reinstalled by reversing the removal procedure.

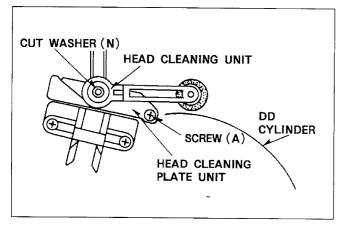

Figure M23

6-6. MECHANICAL ADJUSTMENT PROCEDURES

6-6-1. FLOW CHART OF TAPE INTERCHANGEABILITY ADJUSTMENT

AFTER RE-INSTALLING THE UPPER OR LOWER CYLINDER

6-6-3. FINE ADJUSTMENT OF THE TAPE GUIDE POST HEIGHT

6-6-6. COARSE ADJUSTMENT OF THE A/C HEAD HORIZONTAL POSITION

6-6-7. FINE ADJUSTMENT OF THE A/C
HEAD HORIZONTAL POSITION

AFTER RE-INSTALLING THE A/C HEAD

6-6-3. FINE ADJUSTMENT OF THE TAPE GUIDE POST HEIGHT

AFTER RE-INSTALLING THE INCLINED BASE (T)

6-6-2. COARSE ADJUSTMENT OF THE P2, P3
POST HEIGHTS

6-6-8. ADJUSTMENT OF THE INCLINED BASE (T)

6-6-3. FINE ADJUSTMENT OF THE TAPE GUIDE POST HEIGHT

AFTER RE-INSTALLING THE PULL-OUT (P5) POST

6-6-4. ADJUSTMENT OF THE PULL-OUT POST (P5) HEIGHT

AFTER RE-INSTALLING THE P2, P3 POST

6-6-2. COARSE ADJUSTMENT OF THE P2, P3 POST HEIGHTS

6-6-3. FINE ADJUSTMENT OF THE TAPE GUIDE POST HEIGHT

6-6-2. COARSE ADJUSTMENT OF THE TAPE GUIDE POST HEIGHTS (P2 and P3)

Note: The Tape Guide Posts have been precisely adjusted at the factory. Therefore, normally do not change the height of the P2 and P3 Posts.

To prevent the alignment tape from being damaged, use a normal cassette tape for this procedure.

<< TOOL >>

Post Adjustment Plate ······\	/FK1012
Reel Table Height Gauge ······	/FK0190
Post Adjustment Screwdriver ······	/FK0329
Check Light ······	/FK0948
L Type Screwdriver ······\	/FK0269

- 1. Remove the cassette compartment (Refer to Disassembly Procedures).
- 2. Place the Post Adjustment Plate over the reel tables. Confirm that the Post Adjustment Plate is firmly seated as shown in Figure M25-A.

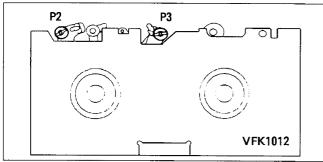

Figure M25-A

 Lower 2 tape guide posts (P2 and P3) by turning the Post Adjustment screwdriver so that the condition of post becomes as shown in Figure M25-B. That is the lower edge of Tape guide should be lower than surface of AdjustmentPlate.

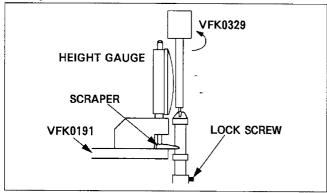

Figure M25-B

Note: Before turning P2 and P3 slightly loosen the Lock Screw using the L Type Screwdriver.

 Place the scraper of Reel Table height Gauge as shown in Figure M25-C.

Set the gauge to zero, then raise the post slowly until the

lower tape guide just touches the bottom of the scraper. Use the gauge to determine the exact point at which the lower tape guide touches the scraper.

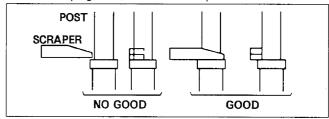

Figure M25-C

- 5. After the adjustment, install the cassette compartment referring to Reinstallation of cassette compartment.
- Play back the beginning portion of NV-T160 cassette tape, and confirm that tape travel as shown in Figure M25-D.

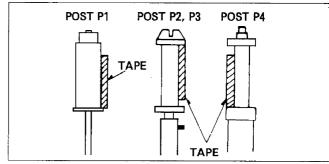

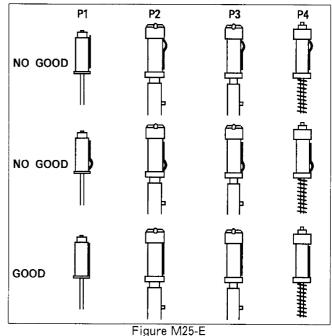

Figure M25-D

- 7. Make sure that the edges of the tape are not curling or waving at the bottom or top end of the posts P2, P3 by using the Check Light.
- 8. If there are waving or filling at the lower or upper edge of the P2 and P3 posts, readjust the heights of P2 and P3 Posts correctly as shown in Figure M25-E.

And confirm that the tape runs along the Cylinder Lead Correctly.

6-6-3. FINE ADJUSTMENT OF THE TAPE GUIDE POST HEIGHT (P2 and P3)(LINEARITY)

<< T00L >>

Alignment Tape VFM8080HQFP
Post Adjustment Screwdriver ·········VFK0329

Note: Before playing back the alignment tape playback a normal cassette tape and confirm correct transport.

- Connect the oscilloscope to the TP2 of the Video I/O C.B.A. (Video RF Envelope and the head switching pulse as a triggering signal.
- 2. Play back the 2-nd portion (Monoscope 2) of the alignment tape (VFM8080HQFP).
- 3. Adjust the tracking control on the front panel so that the RF envelope becomes maximum.
- 4. If the RF envelope appears like example A or B in Figure M26-B then adjustment of the tape guide post (P2; Entrance) is necessary.

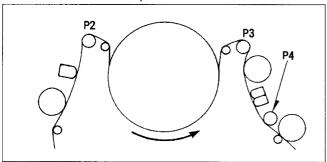

Figure M26-A

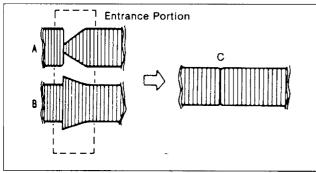

Figure M26-B

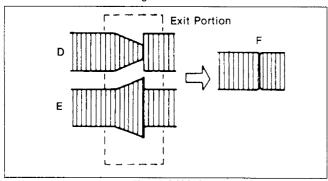

Figure M26-C

- 5. Adjust the tape guide post (P2) with the post adjustment screwdriver so that the RF envelope waveform at the entrance portion becomes flat as shown in Figure M26-B.
- 6. If the RF envelope appears like example D or E in Figure M26-C, then adjustment of the tape guide post (P3; Exit) is necessary.
- 7. Adjust the tape guide post (P3) in the same manner as the P2 post so that the exit portion becomes flat as shown in Figure M26-C.
- 8. The output envelope should vary nearly parallel with other condition as shown in Figure M26-D.

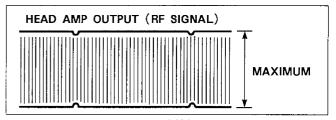

Figure M26-D

9. If the RF envelope does not meet these specification,

 $V1/V0 \ge 0.7$

V2/V0 ≥ 0.8

V3/V0 ≥ 0.7

then repeat steps 4-9 again.

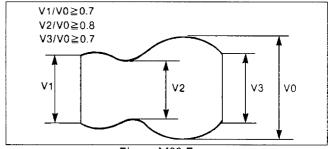

Figure M26-F

Post AdjustmentPlatee ········VFK1012
Reel Table Height Gauge ·····VFK0190
Nut Driver ·····Purchase locally

<< SPEC >>

0.03mm 0.01mm

Note: Unless the replacement or adjustment this post is required, the adjustment nut should not be turned.

- 1. Remove the cassette compartment (Refer to Disassembly procedures).
- 2. Place the Post Adjustment Plate over the reel tables as shown in Figure M27-A.
- 3. Turn the Worm Shaft counterclockwise (loading direction) until the mechanical condition becomes as shown in Figure M27-A.
- 4. Placethe Reel Table Height Gauge on the Post Adjustment Plate and set the gauge to zero 0 as shown in Figure M27-B.

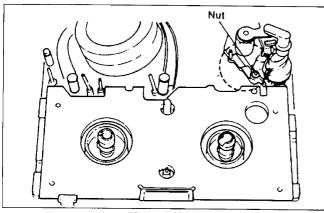

Figure M27-A

5. Place the Reel Table Height Gauge as shown in Figure M27-C and turn the nut slowly until the gauge reads.

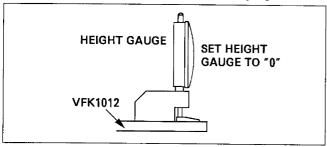

Figure M27-B

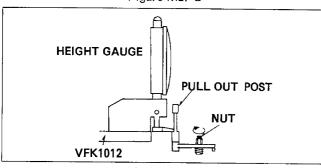

Figure M27-C

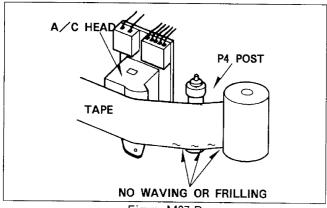

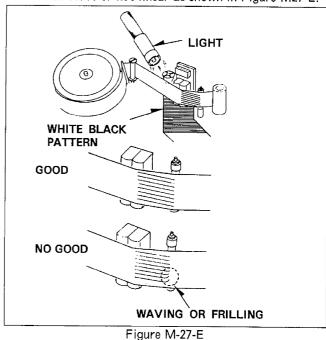

Figure M27-D

- 6. After the adjustment, install the cassette compartment (Refer to reinstallation of Cassette Compartment).
- 7. Play back a normal cassette tape on Review search mode, and make sure that the edges of the tape are not curling or waving at the bottom end of the P4 post by using the Check Light as shown in Figure M27-E.

Note: There is easy method to check Waving of Filling. If there is Waving or Filling in the lower edge, the white black pattern which is reflected on the tape will curve or not linear as shown in Figure M27-E.

6-6-5. ADJUSTMENT OF THE A/C
HEAD

A. COARSE ADJUSTMENT OF THE A/C HEAD HEIGHT

Note: This procedure should be performed only when the A/C Head is replaced.

- 1. With the tape running, look at the lower edge of the control head by using the check light.
- 2. Adjust the Nut (A) as shown in Figure M28-A by turning the Nut (A) clockwise to lower the head, and counterclockwise to raise it.

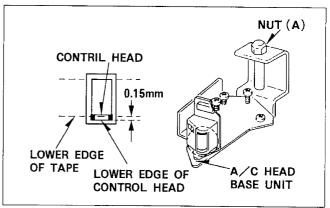

Figure M28-A

B. COARSE ADJUSTMENT OF THE A/C HEAD TILT

Note: This procedure should performed only when the A/C Head is replaced or posts heights are readjusted.

VHS Video Tape

1. Play back the beginning portion of 120 minute normal cassette tape and confirm that waving or filling of P3 post is as shown in Figure M31-A.

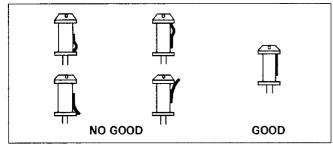

Figure M31-A

2. If there are waving at the lower and upper edge of the P3 post, Adjustment the inclined base of P3 post as shown in Figure M31-B.

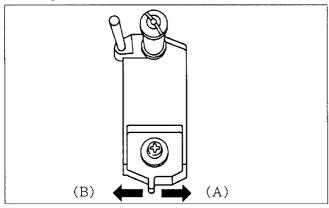

Figure M31-B

[When the inclined base is adjust to an arrow direction (B) tape becomes to lower edge.]

- 3. Confirm that tape position P3 post is upper edge and then tighten screw as shown in Figure M31-B.
- Confirm that waving is occurred between upper side of P3 post and A/C head. If there is waving adjust step 2.

Note: After adjust inclined base tapeinterchangea-bility and A/C head adjustment must be required.

6-6-9. ADJUSTMENT OF THRUST GAP

- Turn the thrust adjustment screw clockwise to until the capstan rotor just separate from the capstan stator whit rotating the capstan rotor by hand.
- 2. Turn the thrust adjustment screw clockwise to 180 degrees from paint at step 1.

3. Set the 2 oil seal to edge of the capstan housing as shown in Figure M32.

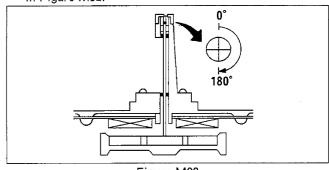

Figure M32

6-6-10. ADJUSTMENT OF FG GAP

<< TOOL >>
Fine Adj. screwdriver·······VFK0330
Screwdriver ·····Porchase loclly
<< SPEC >>

0.13mm 0.02mm

- 1. Loosen screw (Q) and set the Fine Adjustment screw driver n the hole on the Capstan Stator Unit.
- 2. Adjust the gap between FG head and the Capstan Stator unit.
- 3. After adjustment tighten a screw (Q).

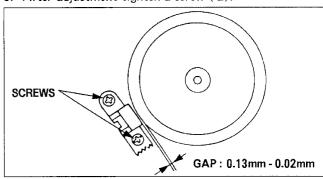

Figure M33-A

Note: After adjust FG head gap, FG output level confirmation must be required.

Do not touch the surface of rotor and keep any magnetizable material away.

CONFIRMATION OF FG OUTPUT LEVEL

- Connect a oscilloscope to TP8009 (CAP FG output) on the Video 3 C.B.A.
- Confirm that FG output level is within specification during PLAY/REC or PLAY mode.
- 3. If FG output level is out of specification Readjust the step 1 to 3 of FG GAP Adjustment.

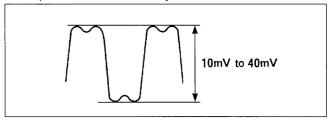

Figure M33-B

6-6-11. MEASUREMENT AND ADJUSTMENT OF BACK TENSION

<< TOOL >>

Back Tension MeterVFK0132 VHS Cassette Tape (120min. tape except S-VHS tape)

A. FWD TENSION ADJUSTMENT

<< SPEC >> 23g ~ 27g

- Play back the cassette tape from the beginning and wait until the tape movement get the stabilization (for approx. 10 to 20 seconds).
- Pull the Impedance Roller in the direction indicated the arrow in Figure M34-A secure it with a piece of adhesive tape.
- 3. Insert the Back Tension Meter into the path of a tape, and measure the back tension.
- 4. If it is out of specification, replace the Tension spring.

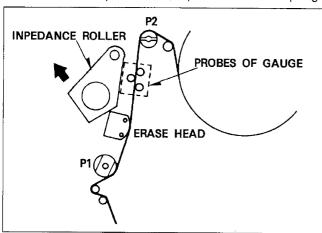

Figure M34-A

B. REV TENSION ADJUSTMENT

<< SPEC >> 30g ~ 60g

- 1. Play back the cassette tape on SP Reverse Play mode from the beginning and wait until the tape movement get the stabilization (for approx. 10 to 20 seconds).
- 2. Pull the Impedance Roller in the direction indicated by the arrow in Figure M34-A secure it with a piece of adhesive tape.
- 3. Insert the Back Tension Meter into the path of a tape, and measure the back tension.
- 4. If it is out of specification, replace the Tension spring.

Note: While measuring, make sure that the three probes of the meter are all in good contact with the tape.

As the tension meter is very sensitive, we recommend taking 3 separate readings.

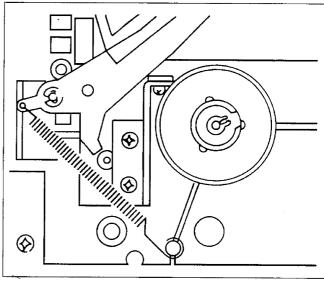

Figure M34-B

6-6-12. HEIGHT ADJUSTMENT OF THE REEL TABLES

<< TOOL >>
Post Adjustment Plate ··········VFK1012
Reel Table Height Gauge ······VFK0190

<< SPEC >> 0 ~ 0.15mm

- 1. Remove the cassette compartment.
- Place the post Adjustment Plate on the reel tables.
- 3. Place the Reel Table Height Gauge on the plate so that the scraper of the gauge touches the cut- out portion of the plate, then set the gauge to zero 0 as shown in Figure M35-A.

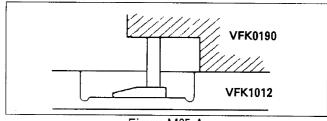

Figure M35-A

 Measure the height of the top surface of either Reel table and note the difference in height from the plate cut-out (Figure M35-A and M35-B). Repeat this procedures for the other Reel Table.

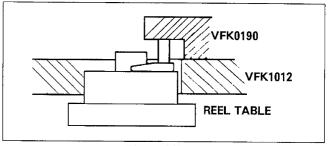

Figure M35-B

5. If the difference of Supply Reel table is more than 0.15mm higher or lower, replace the Supply Reel table. When the difference of Take Up Reel table is more than 0.15mm higher or lower, adjust nut (A)(Figure M35-C) so that measurement becomes the spec. If you can not adjust to the spec., replace Take Up Reel table.

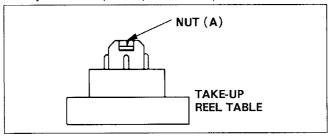

Figure M35-C

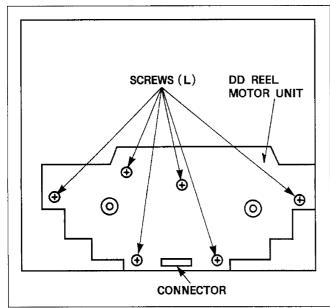

Figure M35-D

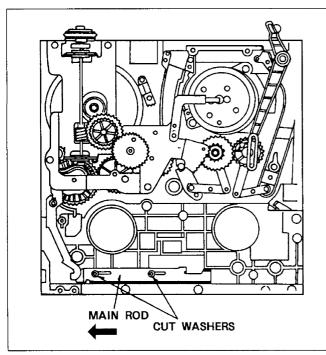

Figure M35-E

Note: When replacing the tables, the DD Reel Unit needs to be removed from the chassis. Remove 6 screws and carefully lift it out as shown in Figure M35-D. When assembling the DD Reel Unit, slide a Main Rod to far left side by rotating the Center Gear, and then screw the 6 screws.

6-6-13. MEASUREMENTAND ADJUSTMENT OF THE BRAKE TORQUE

<< TOOL >>	
Torque Gauge	VFK0133
Adaptor for G	auge·····VFK0134

- 1. Remove the top cover and the cassette compartment.
- 2. Attach the adapter to the torque gauge and place the deck in STOP mode (Sub loading mode).
- 3. Place the torque gauge on the reel table as shown in Figure M36-A. The weight of the gauge should not rest on the reel table.
- 4. Turn the torque gauge in the direction indicated in Figure M36-B until the brake begins slipping and read the gauge.

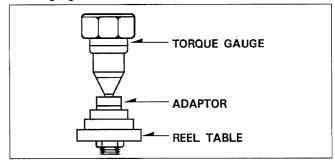

Figure M36-A

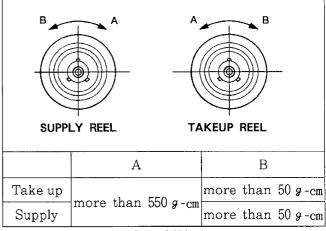

Figure M36-B

5. If it is out of specification, replace the Brake Spring.

Note: If the proper brake torque cannot be obtained by replacing the Brake Spring, clean thbraking surface of the reel table with a soft cloth and re-measure the brake torque. If its still out of specification, replace the Main Brake (S) or (T) Unit.

6-6-14. PRESSING FORCE CONFIRMA TION OF PRESSURE ROLLER UNIT

<< TOOL >> Fan Type Tension Gauge ·······VFK66 VHS 120min, Cassette Tape

<< SPEC >> 1050g ± 230g

- 1. Remove the Cassette Compartment.
- 2. Play back the end portion of VHS (120min.) tape.
- Set the Fan Type Tension Gauge to the part (A) of Pinch Roller Unit.
- 4. Press the Arm with the Gauge, in the direction indicated by the arrow as show in Figure M37.
- 5. Adjust the Solenoid Base so that the reading of the Tension Gauge is 1050g \pm 230g at the moment of the tape running stop.
- 6. If it is out of specification, replace the Tension spring.

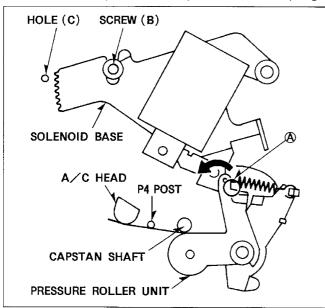

Figure M37

6-6-15. ADJUSTMENT OF REV TENSION SENSOR POSITION

Tension Sensor Adj. Fixture······VFK0806
Tension Post Adj. PlateVFK0236
Fine Adj. ScrewdriverVFK0330
Digital Volt Meter Purchase locally

<< SPEC >> 2.3V ~ 2.7V

Note: Assemble a Tension Sensor Adjustment Fixture (VFK0806) and a Tension Post Adj. Plate (VFK0236) as shown in Figure M38-A.

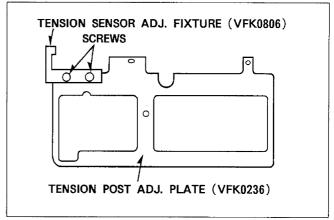

Figure M38-A

- 1. Remove the Top Plate and Cassette Holder Unit. (refer to Disassemble Procedures)
- 2. Disconnect the 4pin and 2pin flat wire to the pin 3 and 4 of the connector P1508.
- 3. Connect two wires of 4pin flat wire to the pin 3 and 4 of the connector P1508 as shown in Figure M38-B.

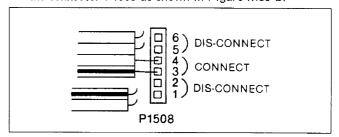

Figure M38-B

- 4. Push the Sub Wiper Arm (R) to direction of Cassette loading. Then the Sub Wiper Arm (R) goes down it self and mode of machine change to STOP.
- 5. Turn the Power switch off.
- 6. Remove the Cassette Compartment (refer to Disassembly Procedures).
- Connect the V.T.V.M. of D.V.M. to TP2502 on the SERVO/SYSCON C.B.A.
- 8. Place the Tension Post Position Adjustment Plate with the Fixture over the reel tables as shown in Figure M38-C.

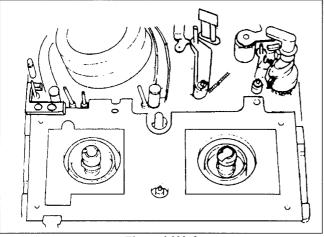

Figure M38-C

- 9. Turn the Power switch on.
- 10. Slightly loosen 2 screws (C). Insert a Fine Adj. Screwdriver in the hole (D)(Figure M38-D).

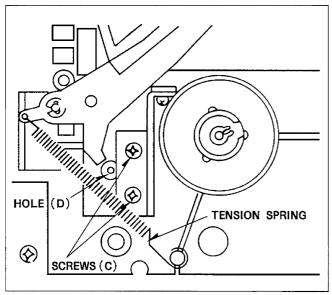

Figure M38-D

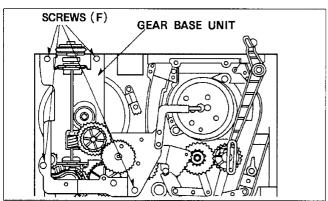

- 11. Press the PLAY button.
- 12. Adjust the Rev Sensor Position so that measurement becomes D.C. 2.3V~2.7V.
- 13. Tighten the 2 Screws (C).14. Remove the Tension Sensor Fixture.
- 15. Reinstall the Cassette Compartment.
- 16. Confirm Playback picture (Rev Playback mode, Playback mode etc.)

6-7. ASSEMBLY AND ADJUSTMENT PROCEDURES OF MECHANISM

The mechanism of this model is mostly engaged to the System Control Circuit, through the mode select switch. Therefore the relation between the mode select switch and the cam gear decides all further mechanical movement of the mechanical parts such as levers, gears, rollers and so on. If these parts are not fixed properly, the unit will be unloaded or compulsorily stopped. And it will result being damaged at any mechanical or electrical parts. The overall mechanical condition (alignment) of bottom and top view are shown in Figure M39-A and Figure M39-B. This mechanical adjustment is performed in the STOP mode.

6-7-1. CONFIRMATION OF ALIGNMENT CONDITION

- 1. Remove the Loading Belt.
- Unscrew 4 screws (F) and remove the Gear Base Unit. (Figure M39-A)
- Turn the Center Gear to counter-clockwise until 2 big holes of Center Gear align with 2 big holes of Retainer Gear and Ring Gear and Chassis as shown in Figure M39-C.

Fiugre M39-A

- 4. Identification hole on the Mode Select Switch at 6 oclock position and aligned with small hole on Pinch Cam as shown in Figure M39-B.
- 5. P5 Arm is completely loading position and the inclined Base (S) and (T) are completely unloading position.
- 6. Small hole on Sub Cam Gear should align with small hole on the Connection Gear and rectangular mark on the Connection Gear should be at a 3 oclock position.
- 7. Pressure Roller Unit is UP position.

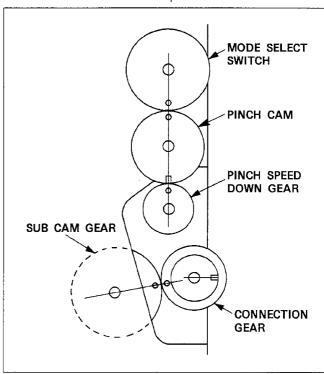

Figure M39-B Top View of Overall IQ-Mechanical Condition

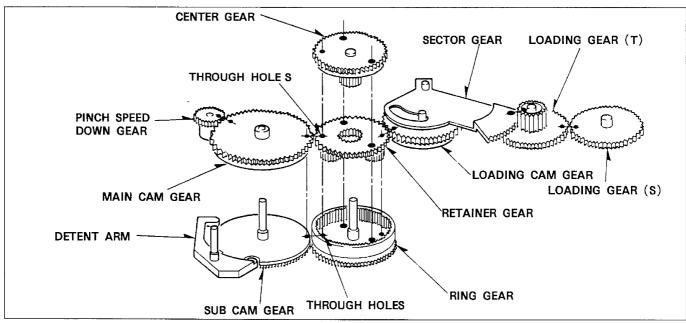

Figure M39-C Bottom View of Overall Mechanical Condition

6-7-2. ASSEMBLY PROCEDURES OF SUB CAM GEAR RING GEAR AND DETENT ARM

- Install the Ring Gear so that the two holes on the Ring Gear align with the two holes on the chassis as shown in Figure M40.
- Install the Sub Cam Gear so that the large hole on Sub Cam Gear aligns with the hole on chassis.
 - Also the small hole (located just outside of large hole) on Sub Cam Gear should align with the hole on Ring Gear as shown in Figure M40.
- 3. Confirm that the small hole on Sub Cam Gear is aligned with the small hole on Connection Gear as shown in Figure M39-B (In case of the Connection Gear is already installed).
- Install the Detent Arm and make sure Detent Arm seats perfectly in detent of Sub Cam Gear as shown in Figure M40.

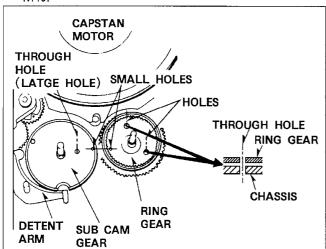

Figure M40

6-7-3. ASSEMBLY PROCEDURES OF MAIN CAM GEAR AND PINCH SPEED DOWN GEAR

- Install the Main Cam Gear on to the Sub Cam Gear so that the small hole on the Main Cam Gear aligns with small hole on the Ring Gear as shown in Figure M41.
- 2. Insert a retaining ring.
- Install the Pinch Speed Down Gear from top side of chassis so that the small hole on the Main Cam Gear as shown in Figure M41.

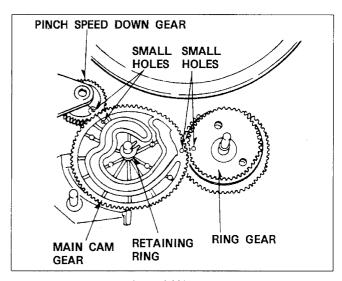

Figure M41

6-7-4. ASSEMBLY PROCEDURES OF LOADING CAM GEAR AND RETAINER GEAR

- Install the Retainer Gear onto the Ring Gear so that the two holes on the Retainer Gear align with the two holes on the Ring Gear, at this time, small hole on the Main Cam Gear should aligns with small hole on the Retainer Gear as shown in Figure M42.
- Install the Loading Cam Gear so that the small hole which is directly outside of the large hole on the Loading Cam Gear is aligned with the outside hole of the Retainer Gear as shown in Figure M42.

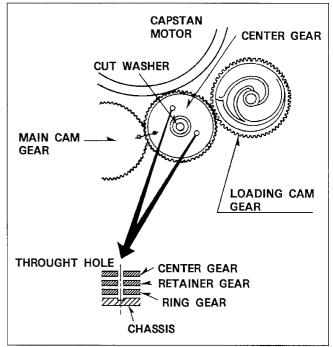

Figure M42

6-7-5. ASSEMBLY PROCEDURES OF CENTER GEAR

 Softly Install the Center Gear onto the Retainer Gear so that the two holes in the Center Gear align with the holes on the Retainer Gear, then install the cut washer as shown in Figure M43.

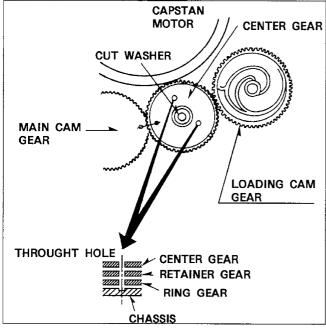

Figure M43

6-7-6. ASSEMBLY PROCEDURES OF MAIN LEVER AND CAM FOLLOWER ARM UNIT

- 1. Install the Main Rod and then insert the cut washers as shown in Figure M44.
- Install the Cam Follower Arm so that the pin of the Cam Follower Arm inserts into the groove of the Main Cam Gear and also inserts into the slot on the Main Rod, insert the retaining ring.

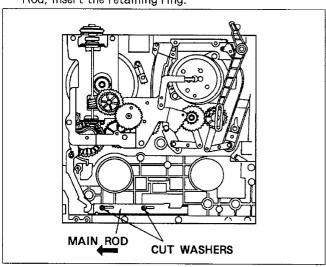

Figure M44

6-7-7. ASSEMBLY PROCEDURES OF LOADINGGEAR (T), LOADING GEAR (S) SECTOR GEAR

- 1. Set the P2 and P3 posts to fully unloaded position, then install the Loading Gear (T) and (S) so that the outer hole on the Loading Gear (T) aligns with the outer hole on the Loading Gear (S) as shown in Figure M45-A.
- Install the Sector Gear so that the outer hole in the Sector Gear aligns with the projection mark on Loading Gear (T).
- 3. Insert 3 retaining rings as shown in Figure M45-B.

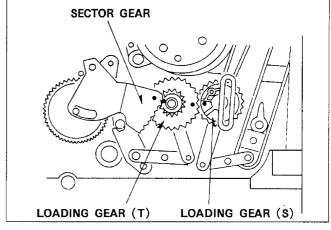

Figure M45-A

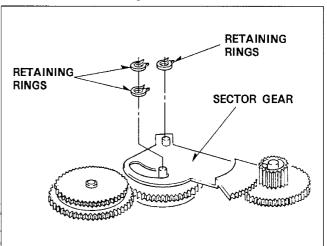

Figure M45-B

6-7-8. ASSEMBLY PROCEDURES OF CONNECTION GEAR

Note: Before assembling, Sub Cam Gear position (and positions of bottom side gears) must be correct as described before (Figure M39-B).

 Install the Connection Gear so that the small hole on the Connection Gear aligns with the small hole on the Sub Cam Gear as shown in Figure M46.

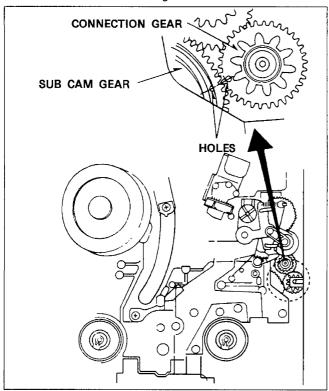

Figure M46

6-7-9. ASSEMBLY PROCEDURES OF MODE SWITCH AND P5 PULL OUT SECTOR GEAR

- 1. Turn the Center Gear to unloading position.
- 2. Install the mode Select Switch and tighten the mounting screw, then solder the 5 soldering portions.
- 3. Install the P5 Pull Out Sector Gear so that the hole of P5 Pull Out Sector Gear aligns with the tip of gear at P5 Arm as shown in Figure M47.

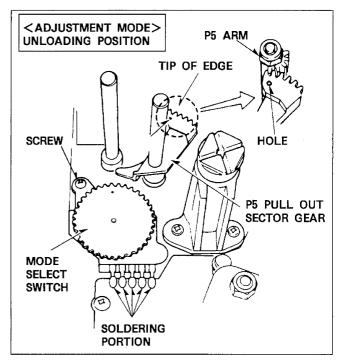

Figure M47

6-7-10. ASSEMBLY PROCEDURES OF PINCH CAM AND PRESSURE ROLLER UNIT

- 1. Install the Pinch Cam while pushing the P5 post forward. The gear of the Pinch Cam should drop to a seated position. In this position make sure hole in the Mode Select Switch aligns with small hole on the Pinch Cam, also the small rift on the Pinch Cam should align with the hole on the Pinch Speed Down Gear sa shown in Figure M48.
- Install the Pressure Roller Unit. Make sure the seats perfectly onto the Pinch Cam, then install the Pinch Cam Cap.

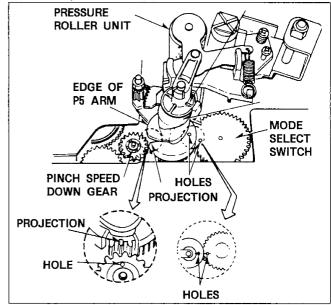

Figure M48

6-7-11. ASSEMBLY PROCEDURES OF GEAR BASE UNIT

 Install the Gear Base Unit and screw 4 screws (F) as shown in Figure M49.

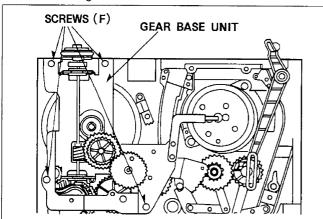

Figure M49

Note: The Gear Base Unit has 2 gears and worm shaft. There is no adjustment for these gears.

6-6-12. REINSTALLATION OF CASSETTE COMPARTMENT

When you reinstall the cassette compartment, the position adjustment of mechanism is necessary for correct operation, as follows.

A. Confirmation of STOP Alignment Condition

- 1. Turn the Worm shaft counter-clockwise or clockwise until mechanism is placed into the Alignment Condition as following conditions.
 - a) Identification hole on the Mode Select Switch at 6 oclock position and aligned with small hole on Pinch Cam. (Figure M48)
 - b) P5 Arm is completely loading position and the Inclined Base (S) and (T) are completely unloading position.
 - c) Small hole on Sub Cam Gear should align with small hole on the Connection Gear (Figure M46) and rectangular mark on the Connection Gear should be at a 3 oclock position.
 - d) Pressure Roller Unit is UP position.

B. Confirmation of Cassette Compartment

 Confirm that the Cassette Compartment is aligned properly. In the EJECT position (Cassette Holder up and advanced to the front) the two V-shaped marks on the slide switch should align. The slide switch is located on the right side of the Cassette Assembly towards the rear as shown in Figure M50A.

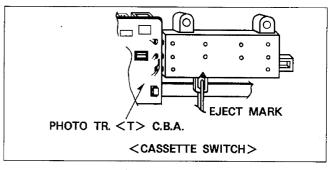

Figure M50-A

- 2. Remove 3 screws (A) as shown in Figure M50-B.
- 3. Take the top plate out.
- Take the cassette Holder unit out as shown in Figure M50-C.

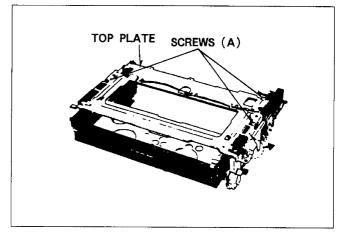

Figure M50-B

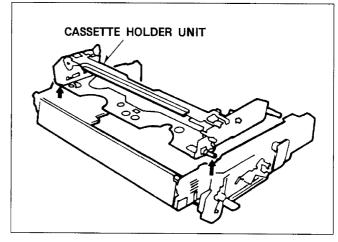

Figure M50-C Removal of Cassette Holder Unit

5. Press the sub wiper arm (R) to direction indicated by arrow so that the sub wiper arm (R) comes to cassette down position (STOP) completely as shown in Figure M50-D and keepit. In this position, the arrow on the Sub Wiper Arm (R) should align with the arrow on the Rack (A)(1) Unit as shown in Figure M50-E.

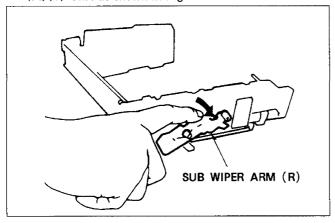

Figure M50-D

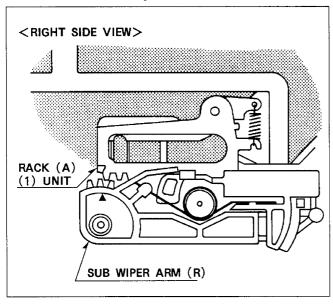

Figure M50-E

6. If the Cassette Compartment is not aligned, realignment may be accomplished by pushing the Main Shaft Unit to the right (gently) and pushing the front of the Rack Unit to the left. This procedure will disengage the teeth of the Rack Gear from the teeth on Sub Wiper Arm assembly.

This will allow you to change the positional relationship between the Sub Wiper Arm Assembly and Rack Unit. This procedure is best attempted in the EJECT position. Once this is done, check for smooth operation of the compartment by inserting a cassette, and pushing in, and down.

C. Installation Procedure

- Bring loading mechanism to the STOP (Sub-load) position.
- Confirm that the chassis is aligned properly for Alignment Condition as shown in Figure M39-B and M39-C.
- 3. Put the Sub Wiper Arm (R) in its full down position (Sub Wiper Arm should rest on plastic protrusion on the bottom of the right side plate).
- 4. Install the cassette compartment (without cassette holder) to chassis so that the rectangular marking (or slot) on the connection gear should be line up with first tooth of the Rack Gear as shown in Figure M50-F and M50-G.

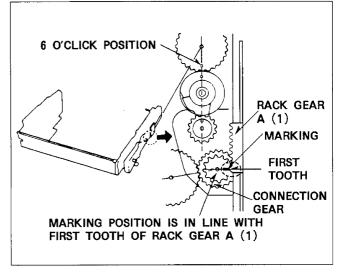

Figure M50-F

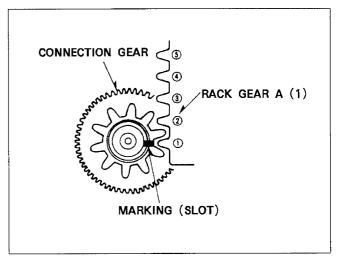

Figure M50-G

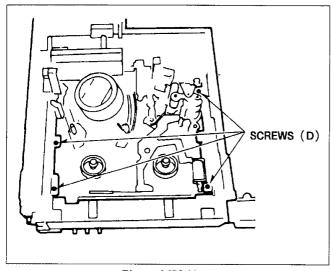

Figure M50-H

- 5. Tighten the 4 screws (D) as shown in Figure M50-H.
- 6. Manually move the loading mechanism toward the EJECT position.
- 7. Stop the manual eject procedure just before completion, so that the Sub Wiper Arms straight up. This position is also characterized by the channel guides (in the Wiper Arms) being directly under the cut outs on the top of the Cassette Compartment base (Figure M50-I).
- 8. Install the Cassette Holder Unit in the Cassette Compartment Base. The Cassette holder should drop into place if the Sub Wiper Arms are portioned as called for in step 7.

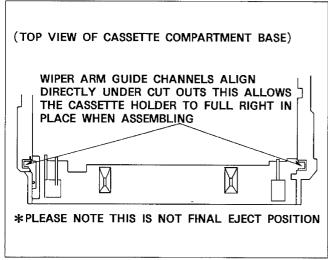

Figure M50-I

Note: For proper front loading, the guide pin on the opener lever should follow the upper track of the right side panel as shown in Figure M50-J.

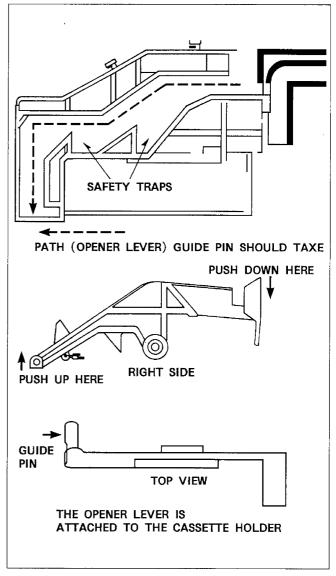

Figure M50-J Right Side Plate

- 9. Install the top plate on the Cassette Compartment Base and tighten the 3 screws (A) as shown in Figure M50-B.
- Manually confirm that front loading and main loading run smoothly. Also confirm EJECT before power is applied.
